Appendix: Historical black bear harvest by hunt unit .....	18

## **INTRODUCTION**

The black bear harvest report presents black bear harvest and hunter effort trends across the state of Utah, based on data collected from bear hunters and compiled by the Utah Division of Wildlife Resources (Division). This report represents the black bear portion of Federal Aid Project W-65-M, segments 64 and 65, grant agreement periods July 1, 2015 through June 30, 2016 and July 1, 2016 through June 30, 2017, respectively. This Federal Aid project covers the 2016 hunting seasons. This report presents black bear statewide trends since the 1960s, as well as population trend indicators.

In addition to its traditional limited-entry hunts, Utah offered two additional types of bear hunts: spot-and-stalk only hunts, where hunters could not use dogs or bait; and harvest-objective hunts, where an unlimited number of hunters could hunt in the harvest-objective unit until the quota was met or the season ended. Bait was not allowed in bear harvest-objective units, and dogs were also not allowed during the fall harvest-objective season (Nine Mile unit). Black bear pursuit was open in all 22 bear units. Three units (Book Cliffs, La Sal, and San Juan) were closed to general black bear pursuit during the summer and only pursuers who applied for and obtained a restricted pursuit permit were allowed to pursue in one of those units. A list of bear units, season dates, rules and regulations for the 2016 black bear hunting and pursuit seasons can be found in the 2016 Utah Black Bear Guidebook.

## **METHODS**

All successful hunters were required to have their bear checked at a Division office or by an officer within 48 hours of harvest. At that time, tooth samples were collected, and a permanent tag affixed. Bear harvest information was also collected. Teeth were sectioned and cementum annuli counted by an independent lab, to estimate age of harvested bear. Bears aged to be 5-yr or older were considered adults for the purposes of calculating percent adult males in the harvest. Bear pursuit information was obtained using a telephone survey of a statistically-valid random sample of bear pursuit permit holders. Data were not collected for the fall pursuit season.

Harvest data from depredating bears, or bears involved in human safety incidents, were taken from damage reports received from USDA-APHIS Wildlife Services and from bears taken by Division personnel. Livestock operators could kill damaging bears and were required to have the carcass checked by a Division officer within 48 hours. Harvest information was collected at that time. Other mortality includes roadkill, poaching, found dead, etc.

### **Changes from Previous Reports**

This annual report presents the most complete and accurate summary of black bear harvest data available at the time of publication. Occasionally, we will adjust previous years' harvest numbers in a subsequent report as more data were made available after publication. This is typically the case with counts of Wildlife Services (depredation) mortality, and only rarely will counts of hunter harvest need adjustment.

## **RESULTS**

In 2016, 635 limited-entry black bear permits and 354 harvest-objective permits were sold. Hunters harvested 314 bears, 144 of which were taken in the spring, 79 in summer, and 91 in the fall. 44% of permits/quota were filled. None of the harvest objective units filled their harvest objectives in 2016. The percent of females in the harvest decreased from 36% in 2015 to 30% in 2016. 53 bears were killed as a result of depredation or other mortality.

Utah issued 492 black bear pursuit permits in 2016. Of these, 96 permits were sold through a drawing system and were valid for one restricted summer pursuit unit/season, in addition to all other unrestricted units and seasons. A total of 345 pursuers went afield during the spring pursuit season, while 172 pursuers pursued in unrestricted units during the summer pursuit season, and 57 pursuers pursued in restricted units during the restricted summer pursuit seasons. During both the spring and summer pursuit seasons, pursuers treed 0.5 bears per day.

More detailed information describing the 2016 black bear harvest and black bear harvest trends can be found in the following tables and figures.
