## PROGRAM NARRATIVE

State: UTAH

Project Number: W-82-R-65

Grant Title: Wildlife Habitat Research and Monitoring

Project Title: Wildlife Habitat Monitoring/Range Trend Studies

Need: The ability to detect changes in vegetation composition (range trend) on big game winter ranges is an important part of the Utah Division of Wildlife Resources (UDWR) big game management program. The health and vigor of big game populations are closely correlated to the quality and quantity of forage in key areas. The majority of the permanent range trend studies are located on deer and elk winter ranges, however on certain management units, studies are located on spring and/or summer ranges, if vegetation composition on these ranges is the limiting factor for big game populations. Range trend data are used by wildlife biologists for habitat improvement planning purposes, reviewing Bureau of Land Management (BLM) and United States Forest Service (USFS) allotment management plans, and as one of several sources of information for revising deer and elk herd unit management plans. Range trend data may also be gathered where habitat information is necessary for other wildlife species such as greater sage-grouse.

Objective: Monitor, evaluate, and report range trend within designated key areas throughout the state, and inform DWR biologists, public land managers and private landowners of significant changes in plant community composition in these areas.

Expected Results or Benefits: Range trend studies in each region will be reread every five years, and vegetation condition and trend assessments will be made for key areas. UDWR biologists, land management personnel from the USFS and BLM, and private landowners will use the range trend database to evaluate the impact of land management programs on big game habitat. Annual reports are readily available on the Division's website, on USBs, and in hard copies located in UDWR regional offices, BLM and USFS offices. Special studies (habitat project monitoring and big game/livestock forage utilization studies) will give UDWR biologists and public land managers' additional information to address local resource management problems.

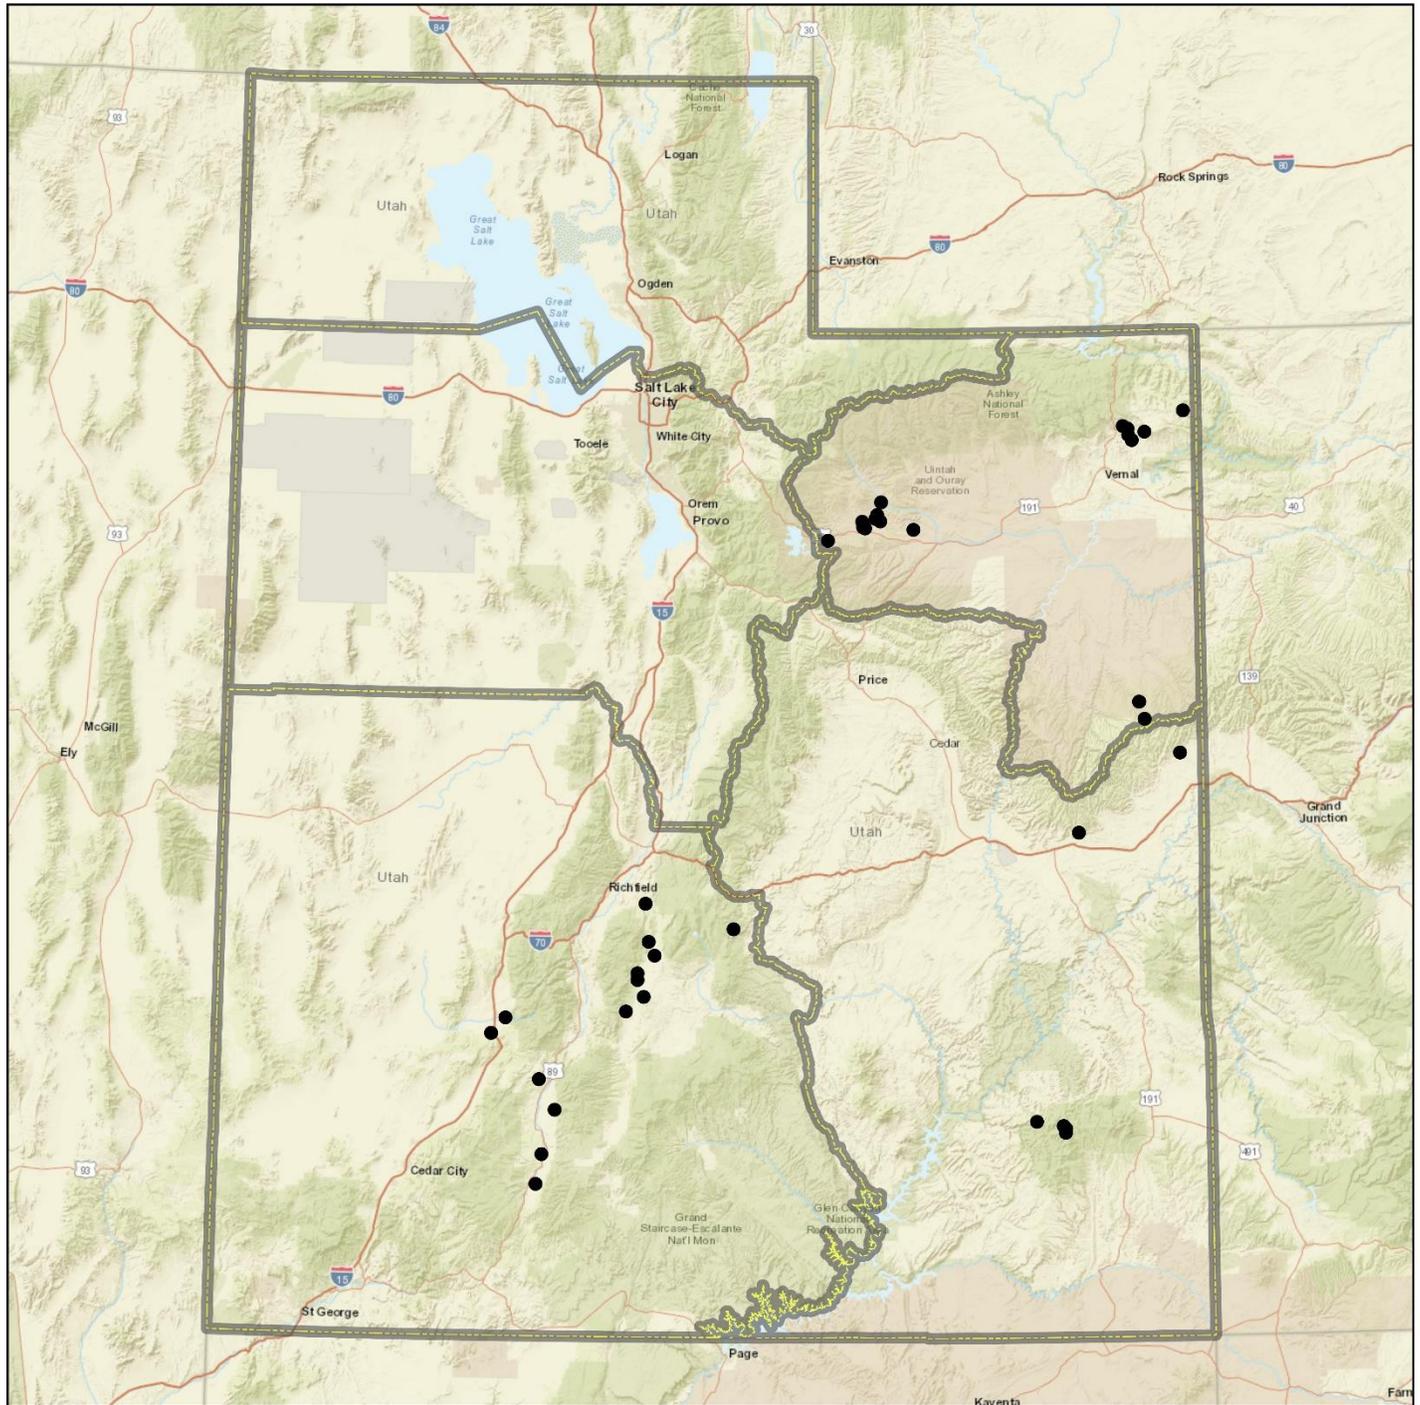

---

## REMARKS

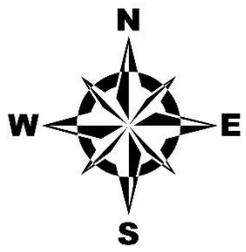

The work completed during the 2020 field season and reported in this publication is vegetation monitoring data of habitat restoration projects initiated as part of the Watershed Restoration Initiative, which occurred throughout the state of Utah.

The BLM and USFS offices provided information and/or assistance in completion of the trend studies, which added to the value of this interagency report. Private landowners were cooperative in allowing access to study sites located on their land.

## RANGE TREND STUDY METHODS

Studies monitoring range trend depend greatly on site selection, especially when dealing with large geographic areas such as wildlife management units. Since it is impossible to intensively monitor all vegetation or habitat types within a unit, it is necessary to concentrate on specific sites and/or “key” areas within distinct plant communities on big game ranges. These “key” areas should be places where big game has demonstrated a definite pattern of use during normal climatic conditions over a long period. Trend studies are located within these areas of high use and/or crucial habitat as agreed upon by DWR, BLM, and USFS personnel. Often, range trend studies are established in conjunction with permanently marked pellet group transects. Once a “key” area has been selected, specific placement for sampling is determined. The sampling grid is carefully placed in order to adequately represent the surrounding area. Half-high steel fence posts or similar material permanently marks all sampling baselines. The first, or “0-foot baseline stake”, is marked with a metal tag for proper identification of the transect.

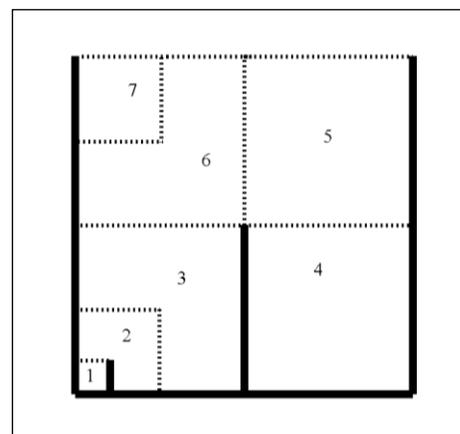

Study sites for the Watershed Restoration Initiative (WRI) are placed to monitor vegetation treatment projects. Studies are established to assess conditions prior to treatment. Each study is re-read approximately every 3-5 years following treatment.

### Vegetation Composition

Vegetation composition is determined by setting up five consecutive 100 foot transects in the area of interest. This 500-foot line is the baseline and one 100-foot belt is placed perpendicular to each 100-foot section of the baseline at predetermined footmarks and centered on the 50-foot mark of the belt. A rebar stake is placed at the beginning of each belt to ensure that future sampling is in consistent alignment with the originally sampled belt. A 1/4 m<sup>2</sup> quadrat is centered every 5 feet along the same side of the belt, starting at the 5-foot mark. Cover and nested frequency values are determined for vegetation, litter, rock, pavement, cryptogams, and bare ground. Cover and nested frequency values are also estimated for all plant species occurring within a quadrat, including annual species. However, prior to 1992 no data was collected for annual species.

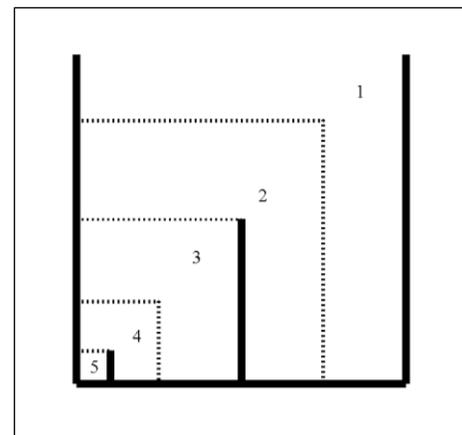

**Percent Cover:** Cover is determined using an ocular cover estimation procedure using seven cover classes (Bailey and Poulton, 1968; Daubenmire, 1959). The seven cover classes are: 1) .01-1%, 2) 1.1-5%, 3) 5.1-25%, 4) 25.1-50%, 5) 50.1-75%, 6) 75.1-95%, and 7) 95.1-100% (Figure 1). For example, to estimate vegetation cover with this method, an observer would visualize which cover class all the vegetation would fit into if the plants were moved together until they were touching. To quantify percent cover for bare ground, litter, rock, pavement, and cryptogams, the observer would visually estimate which cover class could accommodate all of the specified cover type within the quadrat. These numbers are then recorded. To determine percent cover for each belt, the midpoint for each cover class value observed is summed and divided by the number of sampling quadrats (20). The mean for the five belts is the percent cover for a given site.

Total canopy cover of shrubs or trees is also estimated using the line-intercept method (U.S. Department of Interior Bureau of Land Management, 1999). The total distance intersecting the line by a particular species of tree or shrub along each belt is divided by the total length of the line to give percent canopy cover. A six-inch gap rule is used in measuring intercept; gaps less than six inches between the same tree or shrub species are included in total measurement (Boyd et al., 2007).

**Figure 1** Cover classes of the 1/4 m<sup>2</sup> sampling quadrat

**Nested Frequency:** Nested frequency values for the quadrat range from 1-5 according to which area or sub-quadrat the plant species or cover type is rooted in. The notation for each sub-quadrat is as follows: 5 = 1% of the area, 4 = 5% of the area, 3 = 25% of the area, 2 = 50% of the area, and 1 = the remainder of the quadrat. Each time a particular plant species or cover type occurs within the quadrat, it is scored relative to which of the smallest nested quadrats it is rooted in (in the case of vegetation) or where it first occurs (for all other cover types). The highest possible score is 5 for each quadrat occurrence and 100 per belt, for a possible score of 500 for each species or cover type at a given site (Figure 2).

**Figure 2** Nested frequency sub-quadrats of the 1/4 m<sup>2</sup> sampling quadrat.

Higher nested frequency scores represent a higher abundance for that plant species or cover type. These summed values are used to help determine changes in trend and composition through time. Nested frequency has been found to be a more sensitive measurement for changes taking place within plant communities than quadrat frequency (Smith et al., 1987; Smith et al., 1986; Mosley et al., 1986). Plant cover and density values are not reliable indicators of trend for herbaceous species and can fluctuate greatly with precipitation and time of season sampled. Therefore, plant cover and density values can be misleading if used independently and do not necessarily indicate changes in composition and/or distribution of key plant species.

**Shrub Density & Characterization:** Shrub densities are estimated using five, 1/100th acre strips centered over the length of each 100-foot belt. All shrubs rooted within each strip are counted and categorized using a modified Cole Browse Method (U.S. Department of Interior Bureau of Land Management, 1999):

Seedling:	Plants up to three years old, which have become firmly established, usually less than 1/8-inch diameter.
Young:	Larger with more complex branching. Does not show signs of maturity. Usually between 1/8 and 1/4-inch diameter.
Mature:	Complex branching, rounded growth form, larger size, seed is produced on healthy plants. Generally larger than 1/4-inch diameter.
Decadent:	Plant, regardless of age, that is in a state of decline, usually evidenced by 25% or more dead branches.
Dead:	A plant that is no longer living.

**Data Collection for Aspen Density by Size Class:** Starting in 2011, aspen density was estimated using an aspen classification method by Jones, Burton, and Tate (2005). All aspen stems within 67 cm of each side of 100 ft distance tape are counted and recorded in the following size classes:

Size Class I:	less than or equal to 1.5 feet (18 inches). Scan as <i>Seedling</i> This class size represents the annual or recent recruitment of suckers due to suckering at root buds.
Size Class II:	greater than 1.5 feet to 5 feet. Scan as <i>Young</i> This class size represents the survival of suckers and the progression of recruitment of existing suckers that are vulnerable to browsing of the terminal leader.
Size Class III:	greater than 5 feet and up to 1 inch dbh. Scan as <i>Mature</i> This class size represents the aspen regeneration grown above the height range that is vulnerable to browsing; the minimum height for size class III represents the maximum browse line height for herbivores present.
Size Class IV:	greater than 1 inch dbh. Scan as <i>Decadent</i> Class IV captures information for all remaining cohorts in the plot.

Shrubs are also rated according to their availability and the amount of use they display, and placed in one of nine form classes:

1. All available, lightly hedged.
2. All available, moderately hedged.
3. All available, heavily hedged.
4. Largely available, lightly hedged.
5. Largely available, moderately hedged.
6. Largely available, heavily hedged.
7. Mostly unavailable.
8. Unavailable due to height.
9. Unavailable due to hedging.

Lightly hedged\*: 0 to 40 percent of twigs browsed.

Moderately hedged\*: 41 to 60 percent of twigs browsed.

Heavily hedged\*: Over 60 percent of twigs browsed.

Largely available: One-third to two-thirds of plant available to animal.

Mostly unavailable: Less than one-third of plant available to animal.

Unavailable: In classifying browse to a form class, unavailability may be the result of height, location, or density.

\*Degree of hedging is based on leader use over the past three years: current annual growth is not included.

Shrubs are also rated on their health and placed into one of four vigor classes:

1. Normal and vigorous.
2. Insect infested or diseased.
3. Poor vigor
4. Dying

Poor vigor: chlorotic or discolored leaves, smaller than normal stems or leaves, flowering restricted, partially trampled, pulled up, or otherwise damaged. Stunted growth, partial crown death.

Dying: substantial portion of crown dead (more than 50%), more extreme than 3 above. Probably an irreversible condition.

In addition, each mature shrub species closest to every 10-foot mark along a sampling belt is measured to determine average height and crown. This allows a maximum sample of 50 plants per species to be measured at a given site depending on their respective densities.

Point-Center Quadrat Method: Tree density is determined using the point-center quarter method (Mitchell, 2007; Dahdouh-Guebas and Koedam, 2006; Pollard, 1971; Cottam and Curtis, 1956) at 100-foot intervals along the baseline measuring to a maximum of 15 meters. The strip method that is used to estimate shrub density can, in most cases, effectively inventory seedling and young tree densities. However, the strip method is less effective at estimating density of mature trees that are often widely distributed.

Animal Occupancy: The pellet group transect utilizes (50) 100ft<sup>2</sup> circular plots that are placed through the study area. These are usually two parallel transects of 25 plots on each side of the vegetation transect which runs 400 feet to 500 feet in length. The number of recent pellet groups for wildlife (usually deer and elk) and pats for cattle are recorded. That number is then converted to days use per acre (hectare) (Neff, 1968). Quadrat frequency of wildlife and livestock droppings is also captured within the 1/4 m<sup>2</sup> quadrat. Rabbit pellet groups are not included in the pellet group transects but are sampled in quadrat frequency.

Other Information: Management background information, photographs, and knowledgeable plant identification add to the dataset for each site. Management and background information for each site is obtained from the administering agency. Repeat photographs are taken including a general view down and back up the baseline. A close-up of each half-high baseline post further characterizes individual sites. Correct plant identification is critical for a complete and accurate site analysis. Starting in 2016, species identification and classification is reported following the USDA Plant Database taxonomic nomenclature (USDA, NRCS, 2016). Prior to 2015, species identification mostly followed "A Utah Flora" (Welsh et al., 2003). In some cases, most notably *Agropyron sp.* and *Purshia sp.*, the species names used were those found in the Range Trend Study Plant Species List (Giunta 1983), Intermountain Flora (Cronquist et al., 1977), and the Intermountain Range Plant Names and Symbols (Plummer et al., 1977) and were retained to maintain continuity and alleviate confusion with earlier published

reports.

### **Trend Determination**

The methods described above rely on relative and absolute measurements of plant composition as determined from the frequency, cover, and density data. In addition, estimates of plant vigor, average height and crown diameter, form class, and age class are utilized to characterize shrub populations.

In order to assess and interpret the landscape in a more effective way, trend assessments are no longer formally addressed within the report and have been replaced by the Desirable Components Index (DCI), Woodland Succession Phase models, and State-and-Transition Models that are associated with their Ecological Site as described by the National Resources Conservation Service (NRCS). Using these three methods in conjunction will give land managers a more complete assessment of the area of interest, and what measures, if any, need to be taken in order to improve the ecology of a site.

Desirable Components Index: Range Trend Program personnel created the desirable components index (DCI) as a tool to address condition and/or value of winter ranges for mule deer. This index is meant to be a companion to, not a replacement for, the site-specific range trend assessments that are found in the annual Utah Big Game Range Trend Studies report. This index was designed to score mule deer winter range based upon several important vegetation components (i.e. preferred browse cover, shrub decadence, shrub young recruitment, cover of perennial grasses, cover of perennial forbs, cover of annual grasses, and presence of noxious weeds). Although the index may be useful for assessing habitat for other species (i.e. sage-grouse and elk), the rating system was devised to specifically address mule deer winter range requirements.

This index is used primarily to determine if a particular site has the vegetation components necessary to be good winter range for mule deer. It can also be used to identify areas where habitat restoration projects may be needed and assist land managers in determining possible rehabilitation options. Because it does not take into account factors such as soil stability, hydrologic function, and other environmental factors, it should not be used to assess a sites function and/or condition as typically used by the Federal land management agencies.

Desirable mule deer winter range provides 12-20% of preferred browse cover, 20% or less shrub decadency, and 10% or more of the shrub population is young. The herbaceous understory contains 8-15% perennial grass cover, 5% perennial forb cover, and less than 5% annual grass cover. Based on these criteria, communities are scored in a 100-point scale using the following system:

#### *Preferred Browse (60 points)*

(Preferred Browse species are favorable or crucial to deer and are broken into three categories; Highly Preferred, Preferred and Key).

##### Preferred Browse Cover (30 pts. possible)

- Highly Preferred species = 1.5 points for each 1% of cover, Preferred species = 1.25 points for each 1% of cover and Key species = 1 point for each 1% of cover (maximum 30 points)

##### Percent Decadence (15 points possible)

- 0.3 points for each 1% under 50% decadence and -0.3 points for each 1% over 50% decadence (maximum 15 points or minimum -15 points)

##### Percent Young (15 points possible)

- 0.5 points for each 1% of young

#### *Herbaceous Understory (40 points)*

##### Perennial Grass Cover (30 points possible)

- 2 points for each 1% cover

## Perennial Forb Cover (10 points possible)

- 2 points for each 1% cover

## Annual Grass Cover (-20 points possible)

- -0.75 points for each 1% cover

## Noxious Weeds (State List)

- -2 points for each species present

The Desirable Components Index ratings are divided into four categories because each community has a different ecological potential. These categories include very low potential (Desert Ecological Site), low potential (Semidesert Ecological Site), mid-level potential (Upland Ecological Site) and high potential (Mountain and High Mountain Ecological Sites) categories. The four categories are scored based on the above criteria as follows:

## Very Low potential scale (Desert Ecological Site)

> 50	Excellent
50-40	Good
40-25	Fair
25-10	Poor
< 10	Very Poor

## Low potential scale (Semidesert Ecological Site)

> 65	Excellent
45-64	Good
25-44	Fair
10-24	Poor
< 10	Very Poor

## Mid-level potential scale (Upland Ecological Site)

> 80	Excellent
79-65	Good
64-50	Fair
49-35	Poor
< 35	Very Poor

## High potential scale (Mountain and High Mountain Ecological Site)

> 90	Excellent
89-70	Good
69-55	Fair
54-40	Poor
< 39	Very Poor

Once a DCI score has been determined for a particular site, the score can be compared to previous sample years in order to determine a quality trend and better assess conditions that may need to be addressed within the community for mule deer habitat (i.e. .increasing preferred browse cover, decreasing the decadence to young ratio, increasing perennial herbaceous cover, or control/removal of noxious weeds et cetera).

**Woodland Succession:** Although pinyon-juniper woodlands are an important community within their own ecotype, sagebrush steppe, mixed shrub, and grassland communities have experienced significant encroachment of pinyon-juniper woodlands. As active encroachment within these communities continues, abiotic and biotic structures and functions are interrupted, which leads to the reduction of wildlife habitat, forage production, and biodiversity. Moreover, encroachment increases fuel load and fire frequency jeopardizing remnant shrub and grass communities to future loss. In an attempt to describe the succession or maturation of pinyon-juniper, phases of succession are presented within the report to aid managers in identifying the progress of infilling on a particular site and what type of input may be necessary for site rehabilitation (Tausch, Miller, Roundy, & Chambers, 2009).

- Phase I: is described as having an open canopy where crown lift is absent, there is active recruitment of young pinyon-juniper trees to the community with low seed production, and an intact shrub understory (Tausch, Miller, Roundy, & Chambers, 2009).
- Phase II: is described by the expansion of the pinyon-juniper canopy where crown lift is absent, there is active recruitment of young pinyon-juniper trees to the community with moderate to high seed production, and a shrub understory that ranges from nearly intact to one that is significantly thinning (Tausch, Miller, Roundy, & Chambers, 2009).
- Phase III: is described by the stabilization of the pinyon-juniper canopy where crown lift is present and lower limbs are dying, recruitment of young trees is limited with low to moderate seed production, and the shrub understory exhibits 75% or greater dead plants throughout the respective population (Tausch, Miller, Roundy, & Chambers, 2009).

**State-and-Transition:** Ecological sites are individual land types that have the ability to support specific plant species or communities based on the characteristic for their respective land type. Each ecological site therefore has its own potential and responds according to that potential when a site is influenced by natural or anthropomorphic inputs. State-and-Transition modeling attempts to describe an individual ecological site's response to these inputs by dividing the plant communities into states that are comprised of one to multiple community phases and to potentially predict the direction of a community transitioning from one state to another. State-and-Transitions are not trends per se, but rather an illustration of a community's current state in which it has the potential to respond positively or negatively to triggers and thresholds specific to that ecological site. As a tool, State-and-Transition models can provide a way for land managers to interpret a landscape and provide meaningful assessment and monitoring for landscape management. This report identifies each site's potential by supplying the ecological site name and corresponding number, and where available, verifying the provided NRCS state-and-transition models with range trend's quinquennial data, and a description of the transitions between states and phases over the duration of each study. Where not available, state-and-transition models are not referenced, but an attempt is made to describe the transitional processes that have occurred over the duration of a particular study not referenced to a model.

## REPORT FORMAT

The first page of the report is the map page, which has a topographic map and a diagrammatic sketch to illustrate the study location. The map page also contains three sections, *Location information*, *Transect Information* and *Directions to Site*, which contain directions, location, and transect setup descriptions. Following the map page, discussions of the study site are addressed by several topics including *Site Information*, *Wildlife Habitat and Vegetation History*, *Site Notes*, *Soils*, *Site Potential*, and "Trend Summary" tables. Site information contains geographic information such as land ownership, allotment, elevation, aspect, slope, and sample dates. *Disturbance History* contains all known disturbances that have occurred on the site. Known seed mixes are listed within the table named "Seed Mix." *Habitat and Vegetation Information* contains wildlife habitat that the site falls within for specific big game and other species of interest. *Vegetation History* follows *Wildlife Seasonal Habitat* and evaluates any major compositional transitions within the vegetation community. Site notes discuss any miscellaneous information as it relates to the site and immediate area. Site potential presents a table containing average annual precipitation, NRCS taxonomic soil classification, NRCS ecological site, and NRCS ecological site number. If available, the name of the NRCS ecological site will be hyperlinked to the NRCS' website for additional features concerning ecological site. The table titled "Soil Analysis Data" presents texture and chemical characteristics found on the site. The *States and Transitions* portion states if the site has a defined state and transition model available and is followed by, if available, descriptions of any state or phase transitions that have occurred on the site as it relates to the State-and-Transition diagram modeled by the NRCS. Additional assessment is made by comparing photographs from year to year which can be referred to in the accompanying CD or webpage <http://wildlife.utah.gov/range-trend.html>.

The "Trend Summary" tables contain compiled vegetation data for each site. A computer-generated data summary presents the pooled data for nested frequency, quadrat frequency, basic ground cover, soil characterization, shrub density, and shrub characterization.

### Report Description

The following tables and partial tables are examples from study numbers 09-01 and 11B-06.

## Map Page

The name and directions for locating a site are given on the map page. A topographical map and diagrammatic sketch are provided to show spacial reference of site location and arrangement. A 7.5 minute topographical map name and public land survey description are located below the map. In addition, UTM coordinates follow the public land survey location. Compass bearings are in degrees relative to magnetic north, unless specified as true north (T). Directions to a site and baseline are provided starting from a prominent location on a mileage and turn-by-turn basis that is closely referenced to the diagrammatic sketch. Also included on this page are the identification and dimensions of the specified transect, which include the browse tag number by which the transect is identified, transect bearing and length, belt placement as it relates to the baseline, and belt marker placement as it relates to the belt itself.

## Site Information

**Table 1:** The “Disturbance History” table summarizes what type of treatments and/or disturbances have affected the site over its history. Where available, historic treatments have been listed that have occurred on the site prior to establishment. If applicable, treatment projects that are associated with the Utah Watershed Restoration Initiative (WRI) are referenced by their project number. Finalization dates or the date in which a particular disturbance occurred are listed with reported affected acreage of the respective disturbance.

**Table 09-01.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Herbicide - Herbicide	Taylor Mountain Fire Rehabilitation	3182	Fall 2014	2200
Chaining - Two-Way Ely Chain	Taylor Mountain Fire Rehabilitation	3182	Fall 2014	1100
Seeding - Rangeland Drill	Taylor Mountain Fire Rehabilitation	3182	October 2014	2000
Hand Crew - Lop and Scatter	Steinaker Draw PJ (CCI)	28	September 2015	266
Seeding - Aerial After	Taylor Mountain Fire--BLM ESR Supplement	3207	December 2014	2019
Fire - Wildfire	Taylor Mountain Road	-	July 2014	3146.98

**Table 2:** The “Seed Mix” tables are included when a seed mix is made available and are referenced to a particular WRI project. Additionally, multiple seed mixes are often associated with one particular treatment and are combined to simplify the appearance of the report.

**Table 09-01.2 Seed Mix.** List of known seeded plant species and rates (if available).

Mix Name		Application Type	Application Date	Acres	
Taylor Mountain fire; drill seed mix		Drill	Oct 2014	200	
Type	Species	Common Name	Cultivar/Source ID	Bulk lbs/acre	PLS lbs/acr
G	Achnatherum hymenoides	Indian Ricegrass		0.50	0.00

## Habitat and Vegetation Information

**Table 3:** The “Wildlife Seasonal Habitat” table is a summarization of habitat for big game and other species of interest, and further categorizes the habitat into seasonal range and a value description of the habitat for the allied species.

**Table 09-01.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
Deer	crucial	winter
Elk	crucial	winter

**Table 4:** The “Vegetation History” table summarizes what major vegetation types have occurred on the site over the duration of the study. Ranges of sample years provide the length of time that the dominant vegetation type has persisted on the site with its corresponding species listed in the adjacent cell. Most vegetation types will have one dominant species listed: this is usually a shrub species (Appendix A - Vegetation Type). For example, some sites will have a shrub canopy that dominates the site with a perennial herbaceous understory that has similar average cover as the canopy, but occurs infrequently. In this case, precedence is given to the shrub layer. Vegetation type can also be shared in the case of co-dominance. Using the example above, if the herbaceous understory had a higher cover, then the shrub layer would likely share the vegetation type with the perennial understory. The history of pinyon-juniper encroachment is characterized within the table stating the phase(s) of succession and the corresponding years of persistence. Phases of woodland succession may also influence the vegetation type. For example, pinyon-juniper encroachments in phase I are not considered co-dominant and may not be listed within the vegetation type column as they are a subordinate vegetation type. Trees in phase II are considered co-dominant with the co-dominant understory counterpart, and under these circumstances tree species are then listed with the understory counterpart within the vegetation type column.

The following “Vegetation History” table indicates that Wyoming big sagebrush was the dominant vegetation type on the site from 1982 to 2010, but the site transitioned to an annual grass-forb community in 2015. The table also indicates that woodland succession has remained in Phase I over the sample years until 2015 when the Taylor Mountain Fire removed all of the trees on the site. The transition from Wyoming big sagebrush to an annual grass-forb community that occurred between the 2010 and 2015 sample years indicates that a trigger mechanism has occurred and a threshold has been crossed that lead to the change in community composition, and in this case is related to the Taylor Mountain fire that occurred in 2014.

**Table 09-01.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
1982	Wyoming Big Sagebrush	Phase I
1988	Wyoming Big Sagebrush	Phase I
1995	Wyoming Big Sagebrush	Phase I
2000	Wyoming Big Sagebrush	Phase I
2005	Wyoming Big Sagebrush/Annual Grass	Phase I
2010	Wyoming Big Sagebrush/Annual Grass	Phase I
2015	Annual Grass-Forb	No Encroachment

#### Site Notes

This section contains miscellaneous information pertinent to the study site.

#### Soils

**Table 4:** Chemical and textural characteristics are listed here and were determined by laboratory analysis from a composite soil sample taken near each of the five baseline starting stakes (Allison and Moode, 1965; Day, 1965; Kenney and Nelson, 1982; Normandin et. al., 1998; Olsen et. al., 1954; Rhodes, 1982; Schoenau and Karamonos, 1993; Sims and Jackson, 1934; Walkley and Black, 1971).

The descriptive terms used for ranges in pH are as follows:

Ultra Acidic	< 3.5
Extremely Acidic	3.5-4.4
Very Strong Acidic	4.5-5.0
Strongly Acidic	5.1-5.5
Moderately Acidic	5.6-6.0
Slightly Acidic	6.1-6.5
Neutral	6.6-7.3
Slightly Alkaline	7.4-7.8
Moderately Alkaline	7.9-8.4
Strongly Alkaline	8.5-9.0
Very Strongly Alkaline	> 9.1

Percent organic matter (% OM) refers to the amount of organic matter in the top 12 inches of the soil profile. Parts per million (ppm) of phosphorus (P) and potassium (K) are also included. Values for phosphorus and potassium less than 6

ppm and 60 ppm, respectively, are considered to have low availability for plant growth and development (Tiedemann and Lopez 2004).

The electrical conductivity of the soil is reported in decisiemens per meter (dS/m). Electrical conductivity is related to the amount of salts more soluble than gypsum in the soil. The following classes can be used as a reference.

Non saline	0-2
Very slightly saline	2-4
Slightly saline	4-8
Moderately saline	8-16
Strongly saline	>16

**Table 09-01.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	% sand	% silt	% clay	% OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	7.9	77.0	12.7	10.3	0.6	6.3	64.0	0.6	08/19/2000

### *Site Potential*

This section is prefaced by the listing of the average annual precipitation, NRCS ecological site name, and NRCS ecological site number. The ecological site name and numbers are determined by range trend personnel by digging a soil pit on site to establish the soil characteristics of the site, which is then dichotomized to establish the name of the ecological site and number.

**State-and-Transitions:** The state-and-transitions section is prefaced by whether or not there is a defined state-and-transitions model proposed for the ecological site. If a model is not proposed, an attempt is made to find a similar ecological site that has a proposed state-and transition model, but is not directly correlated to the site being evaluated. When state-and-transition models are available, an effort is made to summarize the community transitions that have occurred over the duration of the study in conjunction with the referenced state-and-transition diagram provided by the NRCS. This section closely reflects the transitions captured in the “Vegetation History” table, but an emphasis is placed on the states and community phases of a particular vegetation type and what community pathway (mechanism) drove the community phase to its current ecological state. States are identified in the diagram by whole numbers. For example, the reference state is referred to by 1, the current potential state by 2, and subsequent states are labeled 3, 4 and etc. while community phases are nested within a state and are identified by rational numbers. For example, community phases in state 1 would be identified by 1.1, 1.2, 1.3 etc. Transitions are labeled alpha-numerically and are preceded by the letter “T”. It is important to note that this section of the report does not stand alone and care must be taken by the reader to reference the provided state-and-transition model in order to understand the driving factors within the community.

### *Trend Summary Tables*

**Table 6:** The “Shrub/Tree Summary” table summarizes percent average quadrat cover and percent average line intercept cover for all shrub and tree species occurring on the site. Average quadrat cover is determined using cover classes in conjunction with the 1/4m<sup>2</sup> quadrat to estimate percent quadrat cover. To more accurately estimate canopy cover of trees and shrubs, the line-intercept method is used along each 100-foot belt.

**Table 09-01.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees.

Year	Quadrat Cover (%)			Line-intercept Cover (%)		
	Preferred Shrub	Other Shrub	Tree	Preferred Shrub	Other Shrub	Tree
1995	21.2	4.1	-	-	-	-
2000	20.0	2.1	-	-	-	-
2005	14.8	0.2	-	20.1	0.8	-
2010	16.3	0.2	-	17.6	0.6	-
2015	-	-	-	-	-	-

**Table 7:** The “Herbaceous Summary” table summarizes the total average cover for all grass and forb species and summarizes the nested frequency by life form.

**Table 09-01.7 - Herbaceous Summary.** Nested frequency and average modified Daubenmire quadrat cover by year for herbaceous functional groups.

Year	Nested Frequency				Quadrat Cover (%)			
	Annual Grass	Perennial Grass	Annual/Biennial Forb	Perennial Forb	Annual Grass	Perennial Grass	Annual/Biennial Forb	Perennial Forb
1995	408	133	300	69	7.5	1.7	1.7	0.3
2000	356	99	121	8	7.0	1.2	0.4	0.0
2005	485	62	170	13	21.4	0.8	0.8	0.1
2010	405	78	136	9	17.6	1.6	1.6	0.2
2015	192	180	178	114	17.1	4.2	21.8	3.1

**Table 8:** The “Basic Ground Cover” table summarizes average cover of vegetation, rock, pavement, litter, cryptogams, and bare ground. Vegetation crown cover estimates are projected vertically while the remaining cover types’ cover estimates are a planar projection and when combined will usually exceed 100%. Therefore, comparisons can be made for all cover measurements except for general vegetation cover.

**Table 09-01.8 - Basic Ground Cover.** Average modified Daubenmire quadrat cover by year for basic ground cover types.

Year	Cover Type (%)					
	Bare Ground	Cryptogams	Litter	Pavement	Rock	Vegetation
1995	21.0	15.9	43.5	0.0	0.0	34.0
2000	25.8	18.3	43.0	0.1	-	30.1
2005	16.3	14.2	44.7	0.1	0.0	37.3
2010	20.7	9.7	56.5	-	0.0	36.5
2015	72.9	0.0	14.4	2.0	0.0	36.2

**Table 9:** The “Pellet Group Data” table summarizes the frequency of animal pellets sampled within the 100 quadrats placed along the sampling belts as well as data from a pellet group transect read parallel to the study site baseline. Quadrat frequency of rabbit or big game pellets indicates a relative amount of presence by a particular animal. This data can help characterize changes in wildlife occupancy patterns on a site.

The data presented in the “Days Use per Acre” section of the table is reported from the pellet group transect in conjunction with the vegetation transects. The pellet group transect utilizes 50 100ft<sup>2</sup> circular plots that are placed in the study area: these are usually two parallel transects of 25 plots on each side of the vegetation transect which runs 400 feet to 500 feet in length. The number of recent pellet groups for wildlife (usually deer and elk) and pats for cattle are recorded. That number is then converted to days use per acre (hectare) (Neff, 1968). Animals that do not have a defined defecation rate are recorded as pellets per acre (ha) and are indicated by (\*). Rabbit pellet groups were recorded in a few of the years close to the year 2000, but have not been sample within the transect since that time; these are also recorded as pellets per acre (ha).

**Table 09-01.9 - Pellet Group Data.** Quadrat frequency and pellet group transect data for animal pellets. Rabbit pellet groups are not sampled in the pellet group transect.

Year	Cattle	Coyote	Mule Deer	Elk	Rabbit

t - Tree Species; p - Preferred Browse; i - Introduced Species

**Table 13a:** The “Aspen Characteristics” table summarizes characteristics of the aspen community. Only aspen that was sampled using the size class distribution method is included in this table. Aspen sampled using the modified Cole Browse method is included in the “Browse Characteristics” table. Density is reported for the aspen population and is characterized by age class distribution, which is further subdivided into its corresponding age class demographics; this method was started in 2011. Aspen data prior to 2011 is included in Table 13.

Class I:	Trees are less than or equal to 1.5 ft tall
Class II:	Trees are greater than 1.5 ft to 5 ft
Class III:	Trees are greater than 5ft and up to 1 in. dbh
Class IV:	Trees are greater than 1 in. dbh

The aspen population is then characterized by utilization, which is subcategorized by percentages of moderate and heavily hedged plants, and concluded with the percentage of plants displaying poor vigor.

**Table 11B-06.13a - Aspen Characteristics.** Characteristics of aspen populations including density, size class distribution, and vigor of plants.

Year	Density	Size Class Distribution				Utilization		Poor Vigor (%)
	Plants per Acre	Class I (%)	Class II (%)	Class III (%)	Class IV (%)	Moderate (%)	Heavy (%)	
Populus tremuloides (quaking aspen)								
2015	1620	10	62	20	9	27	11	1

- Class I - Less than or equal to 1.5 feet
- Class II - Greater than 1.5 feet to 5 feet
- Class III - Greater than 5 feet and up to 1 inch diameter at breast height (dbh)
- Class IV - Greater than 1 in diameter at breast height (dbh)

**Table 14:** The “Tree Characteristics” table tree density estimates using the point-center quarter method which better estimates density of widely distributed trees than the shrub density strips. Average basal diameter is also listed in centimeters.

**Table 11B-06.14 - Tree Characteristics.** Point-quarter tree density, size class distribution, and average diameter.

## DIAMOND MOUNTAIN BULLHOG - STUDY NO. 09R-4

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Jensen Ridge NW; Township 2S, Range 23E, Section 34  
NAD 83 UTM ZONE 12, 642204 East 4495283 North

**Transect Information**

Browse Tag # (0' Stake)	133
Transect Bearing	193° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

**Directions to Site**

From Vernal, travel northeast on Brush Creek Road heading toward Diamond Mountain for 7.8 miles to a pull off on the right (south) side of the road. Park in the pull off; the witness post is on the south side of the pull off. The 0-foot stake is 185 feet from the witness post at a bearing of 185 degrees magnetic and is marked with browse tag #133.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	S.J. HATCH
Elevation	7,000ft (2,134m)
Aspect	South
Slope	10-13%
Sample Dates	06/29/2004, 08/01/2007, 07/28/2009, 07/27/2010, 06/12/2012, 08/08/2016, 08/03/2020

**Table 09R-04.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Mechanical - Bullhog	Diamond Rim	PDB	September 2004	320
Seeding - Aerial Before	Diamond Rim	PDB	September 2004	320
Seeding - Aerial After	Diamond Rim	PDB	November 2004	320
Hand Crew - Lop and Scatter	Diamond Mountain Maintenance Project (Proposed)	5105	Fall 2020	3000

**Table 09R-04.2 Seed Mix.** List of known seeded plant species and rates (if available).

Mix Name			Application Type	Application Date	Acres
Diamond Rim			Aerial	Sep 2004	320
Type	Species	Common Name	Cultivar/Source ID	Bulk lbs/acre	PLS
G	<i>Dactylis glomerata</i>	Orchardgrass	Paiute	2.03	1.74
G	<i>Pascopyrum smithii</i>	Western Wheatgrass	Arriba	2.03	1.85
G	<i>Poa secunda</i>	Sandberg Bluegrass	Toole MT	0.47	0.38
F	<i>Linum perenne</i>	Blue Flax	Appar	0.94	0.79
F	<i>Medicago sativa</i>	Alfalfa	Ladak+	2.03	1.93
F	<i>Melilotus officinalis</i>	Yellow Sweetclover		0.94	0.87
F	<i>Onobrychis viciifolia</i>	Sainfoin		1.09	1.05
F	<i>Sanguisorba minor</i>	Small Burnet	Delar	2.03	1.93
S	<i>Atriplex canescens</i>	Fourwing Saltbush		0.47	0.21

Mix Name			Application Type	Application Date	Acres
Diamond Rim Shrubs			Aerial	Nov 2004	320
Type	Species	Common Name	Cultivar/Source ID	Bulk lbs/acre	PLS
		Rice Hulls		1.00	0.00
S	<i>Artemisia tridentata</i> ssp. <i>wyomingensis</i>	Wyoming Big Sagebrush	Sanpete UT	1.00	0.28

**Wildlife Habitat and Vegetation History****Table 09R-04.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 09R-04.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Utah Juniper	Phase III
2007	Annual-Perennial Grass	Phase I
2009	Black Sagebrush/Wyoming Big Sagebrush	Phase I
2010	Black Sagebrush/Wyoming Big Sagebrush	Phase I
2012	Wyoming Big Sagebrush/Black Sagebrush	Phase I
2016	Wyoming Big Sagebrush/Black Sagebrush	Phase I
2020	Wyoming Big Sagebrush/Black Sagebrush	Phase I

**Site Notes**

The study is located approximately five and one half miles east of Red Fleet Reservoir within a treated two-needle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) woodland. The Upland Stony Loam (Wyoming Big Sagebrush) ecological type, R034BY334UT, is also a major component of this site.

**Soils****Table 09R-04.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	6.6	61.4	19.1	19.5	2.0	7.0	153.6	0.6	06/29/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	13 inches
NRCS Ecological Site	Upland Shallow Loam (Black Sagebrush)
NRCS Ecological Site #	R034BY320UT
States and Transitions	No state and transition model is available for this ecological site.

This site was dominated by Utah juniper (*Juniperus osteosperma*) when it was established in 2004. Juniper cover was greatly reduced following a bullhog treatment later that year (Table 09R-04.1, Table 09R-04.12) and annual and perennial grasses, particularly cheatgrass (*Bromus tectorum*) and squirreltail (*Elymus elymoides*), were the dominant vegetation components in 2007 (Table 09R-04.7, Table 09R-04.10). Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) and black sagebrush (*A. nova*) increased in abundance and have been the main components of the community since 2009 (Table 09R-04.12, Table 09R-04.13). Utah juniper seedlings have been observed during post-treatment samplings and may indicate that infilling is occurring (Table 09R-04.14).

**Trend Summary Tables****Table 09R-04.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Quadrat Cover (%)			Line-intercept Cover (%)		
	Preferred Shrub	Other Shrub	Tree	Preferred Shrub	Other Shrub	Tree
2004	3.0	0.0	16.7	2.3	-	39.0

## LITTLE DONKEY - STUDY NO. 09R-5

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Donkey Flat NE; Township 3S, Range 22E, Section 01  
NAD 83 UTM ZONE 12, 635070 East 4493818 North

**Transect Information**

Browse Tag # (0' Stake)  
Transect Bearing  
Length  
Belt Placement  
Belt Marker Placement

120  
170° magnetic  
400ft  
Line 1 (11ft & 95ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft)  
Belt 1: No Rebar

**Directions to Site**

From Vernal, travel northeast on Brush Creek Road heading toward Diamond Mountain. Turn left (north) at the Red Fleet turnoff just before crossing Brush Creek. Follow the road as it turns north toward Little Donkey Flat. There is a witness post on the right-hand (southeast) side of the road. The 0-foot stake is 13 paces from the witness post at 120 degrees magnetic.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	DONKEY FLAT
Elevation	5,800ft (1,768m)
Aspect	South
Slope	3%
Sample Dates	06/29/2004, 07/31/2007, 06/11/2012, 08/10/2016, 08/04/2020

**Table 09R-05.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Herbicide - Roundup	Red Fleet	PDB	October 2004	-
Seeding - Truax Drill	Red Fleet	PDB	November 2004	470

S	Atriplex canescens	Fourwing Saltbush	Emery UT	1.00	0.45
S	Bassia prostrata	Forage Kochia	Immigrant	1.06	0.71

**Wildlife Habitat and Vegetation History****Table 09R-05.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
Mule Deer	crucial	winter
Rocky Mountain Elk	crucial	winter
Greater Sage-Grouse	occupied	year-long & Winter

**Table 09R-05.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Perennial Grass	No Encroachment
2007	Annual Grass	No Encroachment
2012	Wyoming Big Sagebrush	No Encroachment
2016	Forage Kochia	No Encroachment
2020	Forage Kochia	Phase I

**Site Notes**

This study is located approximately one mile northeast of the Red Fleet Reservoir Dam.

**Soils****Table 09R-05.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	6.7	60.4	22.1	17.5	0.9	14.7	316.8	0.6	06/29/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	10 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034XY212UT
States and Transitions	A defined state and transition model is available.

When the study was established in 2004, the plant community was dominated by the perennial grass species crested wheatgrass (*Agropyron cristatum*) which was targeted for reduction in the fall of 2004 (Table 09R-05.1). In 2007, the annual grass sixweeks fescue (*Vulpia octoflora*) along with the annual forb woolly plantain (*Plantago patagonica*) responded with an increase in both cover and abundance and became the dominant plants in the community (Table 09R-05.7, Table 09R-05.10, Table 09R-05.11). In 2011, the community transitioned from one influenced by annuals to a community with Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) as the major component. In 2016, forage kochia (*Bassia prostrata*) increased significantly in cover and density (Table 09R-05.6, Table 09R-05.12, Table 09R-05.13); the introduced annual grass cheatgrass (*Bromus tectorum*) was also sampled in high abundance that year (Table 09R-05.10). In 2020, annual and perennial grasses and forbs were found to have decreased substantially in both abundance and cover, while forage kochia remained the dominant component in the community (Table 09R-05.7, Table 09R-05.12). The community appears to be very dynamic and has large population shifts between sample years. With consideration of this variability, it may be difficult to determine outcomes for future land treatment implementations.

**Trend Summary Tables****Table 09R-05.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## NORTH LITTLE DONKEY - STUDY NO. 09R-6

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Donkey Flat NE; Township 2S, Range 22E, Section 26  
NAD 83 UTM ZONE 12, 634830 East 4496614 North

### Transect Information

Browse Tag # (0' Stake)	36
Transect Bearing	340° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From Vernal, travel north on Highway 191 for about 11.3 miles to a road that comes in from the right (east). Turn here, travel 1.6 miles to a fork, and stay to the right. Continue for 3.0 miles, passing Red Fleet Reservoir, to another fork with a dead end sign and continue left (north). Drive for 1.2 miles to a witness post on the left (west) side of the road. The 0-foot stake is 60 paces from the witness post at 210 degrees magnetic and is marked with browse tag #36.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	DONKEY FLAT
Elevation	6,000ft (1,829m)
Aspect	Southwest
Slope	1-2%
Sample Dates	06/30/2004, 07/31/2007, 06/14/2012, 08/10/2016, 08/04/2020

**Table 09R-06.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Seeding - Truax Drill	Red Fleet	PDB	Fall 2004	470

**Wildlife Habitat and Vegetation History****Table 09R-06.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 09R-06.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Annual Forb	No Encroachment
2007	Perennial Grass	No Encroachment
2012	Perennial Grass	No Encroachment
2016	Perennial Grass/Forage Kochia	Phase I
2020	Perennial Grass/Forage Kochia	Phase I

**Site Notes**

This study is located approximately two miles north of Little Donkey Flat within a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) flat.

**Soils****Table 09R-06.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	% sand	% silt	% clay	% OM	PPM P	PPM K	ds/m	Sample Date
Clay Loam	7.2	33.0	39.5	27.5	1.3	5.0	300.8	0.6	06/30/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	10 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034XY212UT
States and Transitions	A defined state and transition model is available.

When the study was established in 2004, this site was dominated by the annual forb flatspine stickseed (*Lappula occidentalis*) with introduced perennial grasses being the subordinate species (Table 09R-06.10, Table 09R-06.11). Since site establishment, browse cover of sagebrush has remained low with little increase. However, excluding the differences between the 2015 and 2020 sample years, forage kochia (*Bassia prostrata*) has had significant increases in cover since its seeding in 2004. Moreover, forage kochia had a significant increase in density in 2020 (Table 09R-06.1, Table 09R-06.12, Table 09R-06.13).

**Trend Summary Tables****Table 09R-06.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## RED FLEET LOP AND SCATTER - STUDY NO. 09R-7

**Location Information**

USGS 7.5 min Map Info	Donkey Flat NE; Township 2S, Range 22E, Section 27
GPS (0' Stake)	NAD 83 UTM ZONE 12, 632742 East 4497729 North

**Transect Information**

Browse Tag # (0' Stake)	37
Transect Bearing	142° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

**Directions to Site**

From Vernal, travel north on Highway 191 for about 11.3 miles to a road that comes in from the right (east). Turn here and travel 1.6 miles to a fork. Turn left (north) and travel 2.3 miles to a "T" intersection just before a pipeline for the phosphorus plant. Turn right (east) and drive for a short distance to the witness post on the right (south) side of the road. From the witness post, walk down a very faint road at 155 degrees magnetic for about 200 feet to the 0-foot stake marked with browse tag #37.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	DONKEY FLAT
Elevation	6,300ft (1,920m)
Aspect	Southeast
Slope	4-6%
Sample Dates	06/30/2004, 07/31/2007, 06/14/2012, 08/10/2016, 08/03/2020

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 09R-07.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Perennial Grass	Phase I
2007	Perennial Grass	Phase I
2012	Perennial Grass	Phase I
2016	Perennial Grass	Phase I
2020	Perennial Grass	Phase I

**Site Notes**

The study is located approximately three miles north of Red Fleet Reservoir. The study monitors an old Utah juniper (*Juniperus osteosperma*) chaining that was treated in the 1960s or 1970s.

**Soils****Table 09R-07.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Loam	7.2	40.6	35.9	23.5	4.2	13.3	217.6	1.3	06/30/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	11 inches
NRCS Ecological Site	Upland Shallow Loam (Black Sagebrush)
NRCS Ecological Site #	R047XC320UT
States and Transitions	No state and transition model is available for this ecological site.

Since study establishment in 2004, this site has been dominated by perennial grasses with black sagebrush (*Artemisia nova*) as a subordinate species. Cover of sagebrush has remained relatively stable (Table 09R-07.7, Table 09R-07.12). Crested wheatgrass (*Agropyron cristatum*) has dominated the herbaceous understory and forbs have remained rare (Table 09R-07.10, Table 09R-07.11). Following a lop and scatter treatment in 2004 (Table 09R-07.1), cover and density of Utah juniper (*Juniperus osteosperma*) decreased substantially. However, young juniper trees remain on the site and provide a source for future infilling (Table 09R-07.12, Table 09R-07.13, Table 09R-07.14).

**Trend Summary Tables****Table 09R-07.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## POT CREEK CHAINING - STUDY NO. 09R-14

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Hoy Mountain SW; Township 2S, Range 25E, Section 04  
NAD 83 UTM ZONE 12, 659297 East 4504682 North

### Transect Information

Browse Tag # (0' Stake)	132
Transect Bearing	239° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

Drive north from Vernal on US-191 to mile marker 225. Turn right (east) to Diamond Mountain Road and drive for 13.4 miles to a fork. Take the left fork and proceed east on Jones Hole Road for 9.1 miles to a road on the left and a sign that reads "Pot Creek Turnoff." Turn left and drive 1.7 miles to another fork: stay left at this fork and drive 2.3 miles to Pot Creek Road. Turn left and proceed for 0.9 miles to the witness post on the left (south) side of the road. From the witness post, the 0-foot stake is 53 paces away at 267 degrees magnetic and is marked with browse tag #132.

**Wildlife Habitat and Vegetation History**

**Table 09R-14.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	summer	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long	brood-rearing
Shiras Moose	crucial	year-long	

**Table 09R-14.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2007	Perennial Grass	No Encroachment
2011	Perennial Grass	No Encroachment
2014	Perennial Grass	No Encroachment
2017	Perennial Grass/Mountain Big Sagebrush	No Encroachment
2020	Perennial Grass/Mountain Big Sagebrush	No Encroachment

**Site Notes**

Livestock were seen in the area in 2017 and sage-grouse were seen and heard adjacent to the site in the same year.

**Soils**

**Table 09R-14.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Clay Loam	6.6	50.2	25.4	24.5	2.6	17.4	195.2	0.6	08/09/2011

**Site Potential**

1981 - 2010 Average Annual Precipitation                      12 inches  
 NRCS Ecological Site    Mountain Loam (Mountain Big Sagebrush)  
 NRCS Ecological Site #    R047XC430UT  
 States and Transitions    No state and transition model is available for this ecological site.

Since establishment in 2007, this study site has been dominated by perennial grasses: in 2020 the most abundant species were hard fescue (*Festuca brevipila*) and Sandberg bluegrass (*Poa secunda*). Perennial forbs have been more common than annual forbs throughout the study period, with lesser rushy milkvetch (*Astragalus convallarius*) and alfalfa (*Medicago sativa*) providing much of the cover in most sample years (Table 09R-14.7, Table 09R-14.10, Table 09R-14.11). Much of the mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) was removed by the Pot Hole Wildfire (Table 09R-14.1) and density was very low during the initial sampling. However, there has been a steady increase in cover and density of sagebrush over the study years and it was considered to be a co-dominant site component in 2017 and 2020 (Table 09R-14.12, Table 09R-12.13, Photos). Barring a major disturbance, sagebrush cover will likely continue to increase on this site.

**Trend Summary Tables**

**Table 09R-14.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Quadrat Cover (%)			Line-intercept Cover (%)

## BRUSH CREEK DIXIE - STUDY NO. 09R-15

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Donkey Flat NE; Township 3S, Range 22E, Section 13  
NAD 83 UTM ZONE 12, 636649 East 4491523 North

**Transect Information**

Browse Tag # (0' Stake)	134
Transect Bearing	25° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Belt 2: No Rebar

**Directions to Site**

From 500 North in Vernal, travel north on Brush Creek Road for 3.1 miles to a witness post on the right (east) side of the road. From the witness post, the 0-foot stake is 56 paces away at 122 degrees magnetic and is marked with browse tag #134.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	S.J. HATCH
Elevation	5,750ft (1,753m)
Aspect	Southwest
Slope	2%
Sample Dates	08/01/2007, 07/27/2009, 07/26/2010, 06/12/2012, 08/11/2016, 07/27/2020

**Wildlife Habitat and Vegetation History****Table 09R-15.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 09R-15.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2007	Wyoming Big Sagebrush	No Encroachment
2009	Wyoming Big Sagebrush	No Encroachment
2010	Wyoming Big Sagebrush/Annual Grass	No Encroachment
2012	Wyoming Big Sagebrush/Annual Grass	No Encroachment
2016	Wyoming Big Sagebrush/Annual Grass	No Encroachment
2020	Wyoming Big Sagebrush/Annual Grass	No Encroachment

**Site Notes**

This study is located approximately two miles to the east of Red Fleet Reservoir on Brush Creek Bench.

**Soils****Table 09R-15.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	% sand	% silt	% clay	% OM	PPM P	PPM K	ds/m	Sample Date
Sandy Clay Loam	6.7	52.2	26.4	21.4	1.1	19.6	176.0	0.5	08/01/2007

**Site Potential**

1981 - 2010 Average Annual Precipitation	10 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034XY212UT
States and Transitions	A defined state and transition model is available.

When the study was established in 2007, the community was dominated by Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) (Table 09R-15.12) with a poor herbaceous understory dominated by the introduced annual grass species cheatgrass (*Bromus tectorum*) (Table 09R-15.7, Table 09R-15.10). Following the herbicide treatment in 2007 (Table 09R-15.1), cheatgrass decreased significantly in abundance and cover and remained comparatively low until 2016 when cheatgrass cover was at its highest. Cheatgrass abundance and cover decreased again in 2020 (Table 09R-15.10). Despite the high abundance of cheatgrass, the vegetation on this site is classified as a sagebrush community type as of 2020. However, the community remains under threat to catastrophic fire due to the persistent presence of weedy annual species.

**Trend Summary Tables****Table 09R-15.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## SEEP RIDGE BULLHOG - STUDY NO. 10R-52

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Seep Canyon SW; Township 15S, Range 23E, Section 08  
NAD 83 UTM ZONE 12, 639910 East 4375992 North

**Transect Information**

Browse Tag # (0' Stake)	183
Transect Bearing	188° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (95ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

**Directions to Site**

From the intersection of Divide Road and Seep Ridge Road, drive north on Seep Ridge Road for 7 miles, then turn left (west). Drive for 0.9 miles to the witness post on the left (south) side of the road. The 0-foot stake is 24 paces away from the witness post at 170 degrees magnetic and is marked with browse tag #183.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	SWEET WATER
Elevation	7,550ft (2,301m)
Aspect	West
Slope	0-5%
Sample Dates	08/04/2011, 08/20/2014, 08/15/2017, 08/19/2020

**Wildlife Habitat and Vegetation History****Table 10R-52.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
American Bison	crucial	year-long
Mule Deer	substantial	winter
Rocky Mountain Elk	crucial	summer

**Table 10R-52.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2011	Pinyon-Juniper	Phase III
2014	Perennial Grass-Forb	Phase I
2017	Mountain Big Sagebrush/Perennial Grass	Phase I
2020	Mountain Big Sagebrush/Perennial Grass	Phase I

**Site Notes**

Cattle were seen in 2017 and a pinyon and juniper island on site was being used as a bedding area (likely by livestock).

**Site Potential**

1981 - 2010 Average Annual Precipitation	17 inches
NRCS Ecological Site	Mountain Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R048AY405UT
States and Transitions	No state and transition model is available for this ecological site.

When this site was established in 2011, it was in Phase III of woodland succession (Table 10R-52.4), being encroached by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) with other browse species such as antelope bitterbrush (*Purshia tridentata*) and mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) also present. Tree cover was greatly reduced following a bullhog and seeding treatment (Table 10R-52.1), and mountain big sagebrush became a dominant vegetation component in 2017 (Table 10R-52.12). Before treatment, the herbaceous understory was depleted and sparse. Afterwards, however, the herbaceous understory became a dominant component on the site with both forbs and grasses being fairly diverse. Squirreltail (*Elymus elymoides*) and thickspike wheatgrass (*E. lanceolatus*) have contributed most of the perennial grass cover following treatment. The introduced annual grass species cheatgrass (*Bromus tectorum*) has been observed on site, but in low amounts (Table 10R-52.10). Although this site has remained in Phase I of woodland succession since 1997 (Table 10R-52.4), the persistent tree component indicates that there may be potential for infilling in future sample years (Table 10R-52.14, Photos).

No Rebar

**Directions to Site**

From the intersection of Seep Ridge Road and the Book Cliffs Divide Road, turn west (right) and drive along the Book Cliffs Divide Road for approximately 2.9 miles to Horse Ridge. Turn north (right) onto Horse Ridge and travel roughly 2.5 miles to the study site which is on the right (east) side of the road; there is no witness post.

**Site Information**

Land Ownership	State
Land Administrator	SITLA
Allotment	BOOKCLIFFS PASTURE
Elevation	7,900ft (2,408m)
Aspect	North
Slope	3%
Sample Dates	08/18/2020

**Table 10R-65.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Herbicide - Spike	Book Cliffs West Water Developments and Spike Treatment (Proposed)	5376	Fall 2020	461

**Wildlife Habitat and Vegetation History****Table 10R-65.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
American Bison	crucial	year-long
Mule Deer	substantial	winter
Rocky Mountain Elk	crucial	summer
Greater Sage-Grouse		

**Table 10R-65.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2020	Mixed Mountain Brush	Phase I

**Site Notes**

No Notes

**Site Potential**

1981 - 2010 Average Annual Precipitation	18 inches
NRCS Ecological Site	Mountain Loam (Browse)
NRCS Ecological Site #	R047XA420UT
States and Transitions	No state and transition model is available for this ecological site.

At the time of study establishment in 2020, this site existed as a mature mixed shrub community with Utah serviceberry (*Amelanchier utahensis*), mountain snowberry (*Symphoricarpos oreophilus*), and alderleaf mountain mahogany (*Cercocarpus montanus*) dominating much of the shrub understory, while Douglas-fir (*Pseudotsuga menziesii*) dominated the upper canopy (Table 10R-65.6, Table 10R-65.12). Although snowberry and Utah serviceberry dominated the preferred browse component, other browse species such as antelope bitterbrush (*Purshia tridentata*), Gambel oak (*Quercus gambelii*), and mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) were also present (Table 10R-65.12, Table 10R-65.13). Grasses and forbs were rare and undiversified in the initial sample year (Table 10R-65.7, Table 10R-65.10, Table 10R-65.11). Following the proposed Spike treatment (Table 10R-65.1), the herbaceous understory is expected to increase in cover and diversity, and mature and decadent shrub populations are expected to diversify in age structure. Furthermore, less dominant shrubs species that are valuable to wildlife may increase in cover following treatment.

**Trend Summary Tables****Table 10R-65.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## SANTAQUIN GREASEWOOD - STUDY NO. 17R-11

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Tabiona SW; Township 2S, Range 7W, Section 31  
NAD 83 UTM ZONE 12, 523633 East 4456728 North

### Transect Information

Browse Tag # (0' Stake)	40
Transect Bearing	180° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From US 40, turn north onto Highway 208. Travel 0.15 miles north of mile marker 4 to a road that comes in from the left (west). Turn onto this road and drive 0.8 miles to a witness post on the left-hand (south) side of the road. The 0-foot stake is 9 paces from the witness post at 180 degrees magnetic and is marked with browse tag #40.

**Site Information**

Land Ownership	State
Land Administrator	UDWR
Allotment	No data
Elevation	6,810ft (2,076m)

**Wildlife Habitat and Vegetation History****Table 17R-11.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 17R-11.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Black Greasewood-Basin Big Sagebrush	No Encroachment
2007	Black Greasewood-Basin Big Sagebrush	No Encroachment
2009	Black Greasewood-Basin Big Sagebrush	No Encroachment
2010	Black Greasewood-Basin Big Sagebrush	No Encroachment
2012	Black Greasewood-Mountain Big Sagebrush	No Encroachment
2016	Mountain Big Sagebrush-Black Greasewood	No Encroachment
2020	Mountain Big Sagebrush-Black Greasewood/Perennial Grass	No Encroachment

**Site Notes**

This study is located eighteen miles northwest of Duchesne within a greasewood (*Sarcobatus vermiculatus*) and big sagebrush (*Artemisia tridentata*) flat.

**Soils****Table 17R-11.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Loam	7.2	49.6	32.9	17.5	1.1	4.5	137.6	1.0	07/15/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation                      13 inches  
 NRCS Ecological Site    Upland Loam (Mountain Big Sagebrush)  
 NRCS Ecological Site #    R047XC310UT  
 States and Transitions    No state and transition model is available for this ecological site.

Between the 2004 and 2010 sample years, the plant community on this site was dominated by greasewood (*Sarcobatus vermiculatus*) and basin big sagebrush (*Artemisia tridentata* ssp. *tridentata*) with mountain big sagebrush (*A. tridentata* ssp. *vaseyana*) as a subordinate species. With the exception of 2010, cover of basin big sagebrush decreased each sample year since 2010, while mountain big sagebrush cover has increased and it has become co-dominant with greasewood (Table 17R-11.12). The herbaceous understory has been mainly comprised of perennial grasses in most sample years, and forbs have remained depauperate in both composition and quantity. The introduced annual grass species cheatgrass (*Bromus tectorum*) has been observed in most years, but in extremely low amounts (Table 17R-11.10, Table 17R-11.11).

**Trend Summary Tables****Table 17R-11.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## SANTAQUIN CHAINING - STUDY NO. 17R-12

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Tabiona SW; Township 2S, Range 7W, Section 30  
NAD 83 UTM ZONE 12, 524344 East 4458436 North

### Transect Information

Browse Tag # (0' Stake)	Not Available
Transect Bearing	294° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From US 40, turn north onto Highway 208. Travel 4.7 miles north to a road that comes in from the left (west). Turn here and drive for 0.6 miles to a powerline road that comes in from the right (this road may be impassable in a vehicle and you may have to continue on foot). Turn here, pass through a gate, and travel on this road at 357 degrees magnetic to pole #D01605. The 0-foot stake is 40 paces from this pole at 330 magnetic.

**Site Information**

Land Ownership	State
Land Administrator	UDWR
Allotment	No data
Elevation	6,870ft (2,094m)
Aspect	East
Slope	2-5%
Sample Dates	09/07/2004, 07/27/2007, 07/13/2009, 06/29/2010, 07/09/2012, 08/02/2016, 07/28/2020

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 17R-12.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Pinyon-Juniper	Phase III
2007	Perennial Grass	Phase I
2009	Perennial Grass/Sagebrush	Phase I
2010	Perennial Grass/Sagebrush	Phase I
2012	Perennial Grass/Sagebrush	Phase I
2016	Perennial Grass/Sagebrush	Phase I
2020	Perennial Grass/Sagebrush	Phase I

**Site Notes**

This study is located approximately eighteen miles northwest of Duchesne within a chained twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) woodland.

**Soils****Table 17R-12.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	7.0	65.4	15.1	19.5	3.5	16.3	128.0	0.9	09/07/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation                      13 inches  
 NRCS Ecological Site    Upland Loam (Mountain Big Sagebrush)  
 NRCS Ecological Site #    R047XC310UT  
 States and Transitions    No state and transition model is available for this ecological site.

Prior to a chaining and seeding treatment in 2004 (Table 17R-12.1), this study site was a twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) woodland that was considered to be within Phase III of woodland succession (Table 17R-12.4). The community transitioned into one dominated by perennial grasses in 2007 (Table 17R-12.7, Table 17R-12.10), and a shrub overstory largely comprised of sagebrush species (*Artemisia tridentata* ssp. *vaseyana*, *A. nova*) became co-dominant in 2009 (Table 17R-12.12). Although cover and density of pinyon and juniper were relatively low in 2020, their presence indicates that this site has the potential for future infilling and returning to advanced phases of woodland succession (Table 17R-12.12, Table 17R-12.13, Table 17R-12.14).

## RABBIT GULCH CHAINING - STUDY NO. 17R-13

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Rabbit Gulch NE; Township 3S, Range 6W, Section 14  
NAD 83 UTM ZONE 12, 540348 East 4451794 North

### Transect Information

Browse Tag # (0' Stake)	Not Available
Transect Bearing	333° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

From Strawberry River Road on US 40, drive east for 1.3 miles to a road on the left (north) side of the road (if coming from the east, drive 1.5 miles from the bridge over Starvation Reservoir). Turn left (north) onto this road and immediately turn right, then drive 0.3 miles to a road on the left. Turn left and continue for 0.8 miles to a fork where the pavement will end. From the fork, stay right and proceed for 0.3 miles to another fork. Stay left at the fork and drive 1.4 miles to the witness post on the right (east) side of the road. From the witness post, walk 150 feet at 152 degrees magnetic to the 0-foot stake.

2008	Greasewood/Annual Forb	No Encroachment
2013	Greasewood/Annual Forb	No Encroachment
2017	Greasewood/Annual Grass	No Encroachment
2020	Greasewood/Annual Forb	No Encroachment

**Site Notes**

There is an oil/gas pad with storage tanks about 200 feet from this site.

**Soils****Table 17R-13.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Loamy Fine Sand	7.6	77.7	15.1	7.2	0.2	6.9	121.6	0.7	07/29/2005

**Site Potential**

1981 - 2010 Average Annual Precipitation	9 inches
NRCS Ecological Site	Semidesert Alkali Loam (Black Greasewood/Wyoming Big Sagebrush)
NRCS Ecological Site #	R034BY213UT
States and Transitions	No state and transition model is available for this ecological site.

This study was established in 2005 in conjunction with a range rehabilitation treatment (Table 17R-13.1). Despite treatment, however, the browse component has remained dominated by greasewood (*Sarcobatus vermiculatus*). Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) is also present, but contributes much less cover than greasewood with density decreasing substantially since 2005 (Table 17R-13.6, Table 17R-13.12, Table 17R-13.13). The introduced annual forb prickly Russian thistle (*Salsola tragus*) and the introduced annual grass species cheatgrass (*Bromus tectorum*) have had significant fluctuations in cover and abundance, and at times have been considered to be co-dominant vegetation components with greasewood. Perennial grasses have remained rare, and perennial forbs have not been observed in any sample year (Table 17R-13.7, Table 17R-13.10, Table 17R-13.11).

**Trend Summary Tables****Table 17R-13.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## GOLDEN STAIRS CHAINING - STUDY NO. 17R-15

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Tabiona NW; Township 2S, Range 7W, Section 08  
NAD 83 UTM ZONE 12, 526077 East 4464013 North

### Transect Information

Browse Tag # (0' Stake)	85
Transect Bearing	297° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

From the junction of US 40 and State Route (SR) 208, drive north on SR-208 to mile marker 8. Drive 0.8 miles past the mile marker to a pullout on the left (north) side of the road: park at this pullout (there is a sign just 0.1 miles north of the pullout). From the pullout, walk 0.37 miles at 333 degrees magnetic to the 0-foot stake. There are some steep cliffs to the right and some less steep cliffs on the left: go between the cliffs to a big wash valley. The 0-foot stake is marked with browse tag #85.

**Site Information**

**Wildlife Habitat and Vegetation History****Table 17R-15.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	year-long	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 17R-15.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2005	Pinyon-Juniper	Phase III
2008	Perennial Grass	Phase I
2013	Perennial Grass	Phase I
2017	Perennial Grass	Phase I
2020	Perennial Grass	Phase I

**Site Notes**

An estimated 55 acres of scattered islands of twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) were left unchained within the treatment area to provide wildlife with protective cover. The study transect ran through an untreated island of the treatment, and as such, parts of belts two and three were not treated.

**Soils****Table 17R-15.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	7.6	57.0	27.4	15.6	2.0	3.5	89.6	0.8	08/01/2005

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Upland Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XC310UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2005, this site was encroached by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) and was considered to be within Phase III of woodland succession; very few browse species were present. Following the chaining and seeding treatment (Table 17R-15.1), much of the tree cover was removed and the browse component increased in both diversity and cover; the site has remained in Phase I of woodland succession in all years following the treatment (Table 17R-15.4, Table 17R-15.12, Table 17R-15.13, Table 17R-15.14, Photos). A mixture of native and introduced perennial grasses, including thickspike wheatgrass (*Elymus lanceolatus*) and crested wheatgrass (*Agropyron cristatum*), has been the dominant vegetation component in post-treatment sample years. Annual grasses have remained rare. In addition, perennial and annual forbs have not been abundant in any sample year (Table 17R-15.7, Table 17R-15.10, Table 17R-15.11).

**Trend Summary Tables****Table 17R-15.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## GREY WOLF CHAINING - STUDY NO. 17R-16

**Location Information**

USGS 7.5 min Map Info                      Fruitland NE; Township 3S, Range 8W, Section 04  
 GPS (0' Stake)                                NAD 83 UTM ZONE 12, 517755 East 4455435 North

**Transect Information**

Browse Tag # (0' Stake)                      86  
 Transect Bearing                                40° magnetic  
 Length    500ft  
 Belt Placement                                  Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)  
 Belt Marker Placement                        No Rebar

**Directions to Site**

From Fruitland, drive east on US-40 to mile marker 65. Continue 0.45 miles past the mile marker to a road on the left (north). Turn left onto this road and drive 2.2 miles past several trailers and through a gate to a fork. Stay left at the fork and drive 0.2 miles to another fork, passing through an enclosure. Take the left fork and proceed for 1.8 miles through a gate to a road on the left (west) side. Turn left and continue for 0.3 miles to a two-track on the right (which may be hard to see). Turn right (north) onto the two-track and drive for 0.15 miles to the witness post on the right (east) side of the road. From the witness post, walk 520 feet at 75 degrees magnetic to the 0-foot stake which is marked with browse tag #86.

**Site Information**

Land Ownership	State
Land Administrator	UDWR
Allotment	No data
Elevation	6,800ft (2,073m)
Aspect	Southwest
Slope	2-4%
Sample Dates	08/02/2005, 08/04/2008, 06/24/2013, 08/01/2017, 07/28/2020

1981 - 2010 Average Annual Precipitation	13 inches
NRCS Ecological Site	Upland Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XC310UT
States and Transitions	No state and transition model is available for this ecological site.

This site was in Phase III of woodland succession upon study establishment in 2005, being encroached by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*); shrubs were rare. However, diversity and cover of browse increased following treatment (Table 17R-16.1), with forage kochia (*Bassia prostrata*) and alderleaf mountain mahogany (*Cercocarpus montanus*) providing the most preferred browse cover (Table 17R-16.4, Table 17R-16.12, Table 17R-16.13, Table 17R-16.14, Photos). The herbaceous understory was sparse prior to treatment. However, perennial grasses, particularly Indian ricegrass (*Achnatherum hymenoides*), thickspike wheatgrass (*Elymus lanceolatus*), and Russian wildrye (*Psathrostachys juncea*), have generally increased in cover and have been the dominant vegetation component in all post-treatment sample years. Forbs have remained diverse and, although they initially increased following treatment, have since decreased in both cover and frequency (Table 17R-16.7, Table 17R-16.10, Table 17R-16.11). Tree infilling appears to be active within the community with cover and density increasing following each pinyon and juniper-targeted treatment in 2005 and 2013 (Table 17R-16.1, Table 17R-16.6, Table 17R-16.12, Table 17R-16.13).

**Trend Summary Tables****Table 17R-16.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## WILDCAT SAGE-GROUSE - STUDY NO. 17R-18

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Deep Creek Canyon SW; Township 3S, Range 10W, Section 36  
NAD 83 UTM ZONE 12, 502660 East 4447065 North

### Transect Information

Browse Tag # (0' Stake)	95
Transect Bearing	230° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

While driving east on US-40, go past Strawberry Reservoir to the road that goes to the Wildcat WMA. Turn right (south) and drive 3.5 miles to a fork. Turn right, drive 0.1 miles to a fork, and stay right. Drive 0.2 miles to another fork and stay right again. Drive 1.3 miles to the witness post on the left (south) side of the road just before a hill. From the witness post, walk 55 paces at 236 degrees magnetic to the 0-foot stake. The 0-foot stake is marked with browse tag #95.

**Site Information**

Land Ownership	State
Land Administrator	UDWR
Allotment	No data
Elevation	7,979ft (2,432m)
Aspect	Southwest
Slope	1-2%
Sample Dates	08/22/2005, 07/11/2012, 08/04/2015, 07/29/2020

**Wildlife Habitat and Vegetation History****Table 17R-18.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	year-long	
Rocky Mountain Elk	crucial	summer	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing
Shiras Moose	crucial	winter	

**Table 17R-18.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2005	Silver Sagebrush/Perennial Grass	NA
2012	Silver Sagebrush/Perennial Grass	NA
2015	Silver Sagebrush/Perennial Grass	NA
2020	Silver Sagebrush/Perennial Grass	NA

**Site Notes**

The study was established in 2005 on Currant Creek Wildlife Management Area (WMA) to monitor habitat for sage-grouse. While a majority of the transect samples the silver sagebrush (*Artemisia cana*) ecological type, a smaller portion samples a mountain big sagebrush (*A. tridentata* ssp. *vaseyana*) ecological type.

**Soils****Table 17R-18.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Clay Loam	6.5	32.4	39.8	27.8	4.5	18.1	275.2	0.5	08/22/2005

**Site Potential**

1981 - 2010 Average Annual Precipitation	19 inches
NRCS Ecological Site	High Mountain Loam (Silver Sagebrush)
NRCS Ecological Site #	R047XA517UT
States and Transitions	No state and transition model is available for this ecological site.

This site has existed as a silver sagebrush (*Artemisia cana*) and perennial grass plant community since study establishment in 2005 (Table 17R-18.7, Table 17R-18.12). The perennial grass component has remained abundant and diverse over the study years with Idaho fescue (*Festuca idahoensis*) contributing a majority of the cover (Table 17R-18.10). In addition, perennial forbs are diverse and fairly abundant (Table 17R-18.11). Deleterious community transitions influenced by overgrazing and fire suppression could lead to the decrease of native forbs with an increase in introduced species.

**Trend Summary Tables****Table 17R-18.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Quadrat Cover (%)			Line-intercept Cover (%)

## ALLEN SMITH RESEED - STUDY NO. 17R-22

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Fruitland NE; Township 3S, Range 8W, Section 15  
NAD 83 UTM ZONE 12, 519024 East 4452480 North

**Transect Information**

Browse Tag # (0' Stake)	147
Transect Bearing	356° magnetic
Length	400ft
Belt Placement	Line 1 (11ft & 95ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft)
Belt Marker Placement	Standard

**Directions to Site**

While driving east on US-40, go to the farthest west turnoff leading to the Strawberry Pinnacles. From there, drive east 0.2 miles to a road on the left (north) side of the road. Turn here and drive north for 0.3 miles to a fork that leads to a compound of trailers. Stay to the right and drive 0.4 miles, passing the trailer compound and coming to another fork. Stay to the right and drive 0.3 miles to a gate. Go through the gate and drive 0.5 miles to power lines crossing the road. From there, drive 0.1 miles to a witness post on the left (west) side of the road. From the witness post, walk 24 paces at 278 degrees magnetic to the 0-foot stake that is marked with browse tag #147.

**Site Potential**

1981 - 2010 Average Annual Precipitation                      12 inches  
 NRCS Ecological Site    Upland Loam (Mountain Big Sagebrush)  
 NRCS Ecological Site #    R047XC310UT  
 States and Transitions    No state and transition model is available for this ecological site.

This study site has been dominated by perennial grasses since its establishment in 2006 (Table 17R-22.7) with the introduced species crested wheatgrass (*Agropyron cristatum*) as the most dominant species. In 2020, there was a significant increase in both cover and abundance of Russian wildrye (*Psathyrostachys juncea*). The introduced annual grass species cheatgrass (*Bromus tectorum*) was present on the site in 2006, but was not observed in subsequent sample years (Table 17R-22.10). Forbs have remained moderately diverse, but have not been particularly abundant (Table 17R-22.11). Despite shrubs remaining rare on the site, density of forage kochia (*Bassia prostrata*) nearly doubled between 2015 and 2020 (Table 17R-22.6, Table 17R-22.12).

## Trend Summary Tables

**Table 17R-22.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Quadrat Cover (%)			Line-intercept Cover (%)

## EAST SANTAQUIN CHAINING - STUDY NO. 17R-24

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Tabiona SW; Township 3S, Range 7W, Section 05  
NAD 83 UTM ZONE 12, 525694 East 4455581 North

### Transect Information

Browse Tag # (0' Stake)	Not Available
Transect Bearing	355° magnetic (Lines 4-5: 331° magnetic)
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

From US-40, drive north on SR-208 for 2.9 miles to a gated road on the right (east) side of the road. Turn here, pass through the gate, and proceed for for 0.7 miles to a fork: turn left and follow the road for 0.3 miles to a fence. Veer left and drive for 0.2 miles to a witness post on the left (west) side of the road. From the witness post, walk 15 paces at 265 degrees magnetic to the 0-foot stake which is marked with browse tag #146.

**Site Notes**

Over 217,000 acres of the Uintah Basin/Northeastern Region suffered sagebrush (*Artemisia sp.*) die-off following a six-year drought. Deer carcasses and limbs were found on site in 2017.

**Soils****Table 17R-24.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	7.0	72.7	14.4	12.8	1.3	9.4	83.2	0.4	07/07/2006

**Site Potential**

1981 - 2010 Average Annual Precipitation                      13 inches  
 NRCS Ecological Site    Upland Loam (Mountain Big Sagebrush)  
 NRCS Ecological Site #    R047XC310UT  
 States and Transitions    No state and transition model is available for this ecological site.

When established in 2006, this study site was dominated by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) and was considered to be within Phase III of woodland succession (Table 17R-24.4, Table 17R-24.14, Photos). The browse component diversified and became a co-dominant site component following treatment (Table 17R-24.1), with forage kochia (*Bassia prostrata*), mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*), and antelope bitterbrush (*Purshia tridentata*) contributing the most preferred browse cover (Table 17R-24.12, Table 17R-24.13). The herbaceous understory also increased in cover and diversity following treatment. Perennial grasses, namely thickspike wheatgrass (*Elymus lanceolatus*), Indian ricegrass (*Achnatherum hymenoides*), crested wheatgrass (*Agropyron cristatum*), and needle and thread (*Hesperostipa comata*), have provided the most herbaceous cover and were considered to be co-dominant with mixed browse in each post-treatment sample year. The introduced annual grass species cheatgrass (*Bromus tectorum*) was observed in all sample years, but with low abundance. Annual and perennial forbs have remained rare (Table 17R-24.7, Table 17R-24.10, Table 17R-24.11). Despite multiple targeted pinyon and juniper reduction treatments, conifer densities appear to have the potential to rebound quickly and woodland succession remains dynamic (Table 17R-24.13, Table 17R-24.14).

**Trend Summary Tables****Table 17R-24.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## TABBY MOUNTAIN - STUDY NO. 17R-35

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Fruitland NE; Township 3S, Range 8W, Section 16  
NAD 83 UTM ZONE 12, 518227 East 4452922 North

### Transect Information

Browse Tag # (0' Stake)	160
Transect Bearing	155° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

Traveling east on US -40, drive to the farthest west turnoff leading to the Strawberry Pinnacles. From there, drive east for 0.2 miles to a road on the left (north) side of US-40. Turn here and drive north for 2.4 miles (0.3 miles to a fork that leads to a group of trailers. Stay to the right and drive 0.4 miles, passing a trailer compound and coming to another fork. Stay to the right and drive for 0.3 miles to a gate. Go through the gate and continue for 0.5 miles to power lines crossing the road. Proceed for another 0.9 miles). Turn left and continue for another 1 mile. The study is on the left (south) side of the road.

**Site Information**

Land Ownership	State
Land Administrator	UDWR
Allotment	No data
Elevation	6,667ft (2,032m)
Aspect	Southeast
Slope	2%
Sample Dates	07/08/2013, 08/02/2016, 07/29/2020

**Table 17R-35.1 Disturbance History.** Recorded history of major disturbances.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	crucial	winter	
Greater Sage-Grouse	occupied	year-long & Winter	brood-rearing

**Table 17R-35.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2013	Perennial Grass	No Encroachment
2016	Perennial Grass	No Encroachment
2020	Perennial Grass	No Encroachment

**Site Notes**

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Upland Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XC310UT
States and Transitions	No state and transition model is available for this ecological site.

This site was established in 2013 and has remained dominated by the perennial grass species crested wheatgrass (*Agropyron cristatum*) since that time (Table 17R-35.10). Forbs have remained depauperate in both composition and abundance (Table 17R-35.11), and forage kochia (*Bassia prostrata*) has contributed the majority of the shrub cover in each sample year. Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) cover significantly increased in 2020, but this increase can only be attributed to a few individual plants (Table 17R-35.12, Table 17R-35.13).

**Trend Summary Tables**

**Table 17R-35.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## SOUTH BOOK CLIFFS - STUDY NO. 10R-55

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Sego Canyon SW; Township 21S, Range 20E, Section 10  
NAD 83 UTM ZONE 12, 613435 East 4318158 North

**Transect Information**

Browse Tag # (0' Stake)	759
Transect Bearing	358° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

**Directions to Site**

From the railroad crossing in the town of Thompson, travel 1.3 miles north on the main road to a fork. Stay left and go 2.2 miles to the Thompson Canyon pictographs, then continue for 0.4 miles. Make a sharp right turn and go 0.2 miles past an old house and a railroad cut to a fork. Turn right, cross a deep gully, and travel 1.15 miles to another fork. Stay left and continue 0.55 miles to a very faint road on the right. Turn on this road and drive south for 0.25 miles; there is no witness post. The stakes are rebar.

**Site Information**

Species	Habitat	Season
Mule Deer	crucial	winter
Rocky Mountain Bighorn	crucial	year-long

**Table 10R-55.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2013	Wyoming Big Sagebrush/Pinyon-Juniper	Phase I transitioning to Phase II
2016	Wyoming Big Sagebrush/Broom Snakeweed	Phase I
2020	Wyoming Big Sagebrush/Annual Grass	Phase I

**Site Notes**

In 2016, a deer carcass was strewn between the 200 and 400-foot stakes.

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034XY212UT
States and Transitions	A defined state and transition model is available.

This site was established in 2013 and was dominated by Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) with few other shrubs present that provided limited cover. Cover and density of twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) trees placed the site in Phase I transitioning to Phase II of woodland succession, thus posing a risk to the resilience of this site (Table 10R-55.4, Table 10R-55.12, Table 10R-55.14). The herbaceous understory was composed of introduced annual grasses and forbs that provided relatively low cover (Table 10R-55.7, Table 10R-55.10, Table 10R-55.11). Following the bullhog and seeding treatments (Table 10R-55.1), tree cover and density decreased and the site has been considered to be within Phase I of woodland succession since 2016. However, the remaining tree component indicates that there may be potential for infilling in future sample years (Table 10R-55.4, Table 10R-55.12, Table 10R-55.14). Broom snakeweed (*Gutierrezia sarothrae*) increased and was a co-dominant vegetation component during the first post-treatment sampling, but has since decreased. Cheatgrass (*Bromus tectorum*) increased in cover and abundance following treatment, becoming a co-dominant vegetation component in 2020 (Table 10R-55.10).

**Trend Summary Tables****Table 10R-55.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## HAT ROCK - STUDY NO. 10R-60

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Bryson Canyon NE; Township 17S, Range 25E, Section 20  
NAD 83 UTM ZONE 12, 657938 East 4353537 North

### Transect Information

Browse Tag # (0' Stake)	702
Transect Bearing	185° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From I-70, take exit #227 and turn north toward the Old Highway Harley Dome. Turn right on the Old Highway and continue for 2.2 miles to Book Cliff Road. On Book Cliff Road, proceed for 5.4 miles to Bryson Canyon Road. Take this road for 2.5 Miles to a "Y," bear right, continue another 2 miles to a "T," and turn right. Proceed for another 2.1 miles and the site will be on the right (south) side of the road, about 80 paces away at 180 degrees magnetic.

**Wildlife Habitat and Vegetation History****Table 10R-60.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
Mule Deer	crucial	winter
Rocky Mountain Elk	substantial	year-long
Pronghorn	crucial	year-long

**Table 10R-60.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2017	Pinyon-Juniper	Phase III
2020	Perennial Grass-Forb	Phase I

**Site Notes**

A midget faded rattlesnake was seen on the site in 2017.

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Semidesert Shallow Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034BY225UT
States and Transitions	A defined state and transition model is available.

At the time of study establishment in 2017, this site was a twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) dominated plant community with juniper being more common than pinyon. However, a bullhog and seeding treatment in the fall of 2017 (Table 10R-60.1) removed nearly all of the trees, and the site was considered to be in Phase I of woodland succession in 2020 (Table 10R-60.4). There were no grasses sampled in 2017 and only two forb species observed. Following treatment, perennial grasses and forbs increased in cover and became the dominant vegetation component on this study site (Table 10R-60.7, Table 10R-60.10, Table 10R-60.11). Shrub species have been sparse prior to and after treatment, with broom snakeweed (*Gutierrezia sarothrae*) contributing a majority of the cover. However, cover and density data show that diversity of shrub species increased slightly in 2020 (Table 10R-60.12, Table 10R-60.13); the site will likely continue to recover as time since treatment increases. Although the phase that this site is in as of 2020 is not described by the current state and transition model, it is likely in the Seeded State (Jornada, 2020).

## SEGO SPRING 1 - STUDY NO. 14R-33

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Poison Canyon NE; Township 34S, Range 19E, Section 12  
NAD 83 UTM ZONE 12, 606679 East 4188573 North

### Transect Information

Browse Tag # (0' Stake)	3900
Transect Bearing	270° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (35ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From Gooseberry Guard Station, travel north for 1.2 miles to Beef Basin Road and take the left fork of the road. Drive for 0.2 miles to Forest Service Road #5147 and again take the left fork. After 0.5 miles, the site will be on the right (north) side of the road. Study 14R-34 is on the south side of the road.

**Site Information**

Land Ownership	Federal
Land Administrator	USFS
Allotment	COTTONWOOD
Elevation	8,766ft (2,672m)
Aspect	Southeast
Slope	4-8%
Sample Dates	08/26/2014, 08/25/2020

**Table 14R-33.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Fire - Prescribed	La Sal/Abajo Prescribed Fire FY20	4882	Summer 2019	21732

Species	Habitat	Season
Mule Deer	crucial	summer
Rocky Mountain Elk	crucial	summer

**Table 14R-33.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2014	Quaking Aspen/Gambel Oak/Snowberry	NA
2020	Quaking Aspen/Gambel Oak/Snowberry	NA

**Site Notes**

This site is located within an enclosure.

**Site Potential**

1981 - 2010 Average Annual Precipitation	26 inches
NRCS Ecological Site	High Mountain Loam (Aspen)
NRCS Ecological Site #	R048AY506UT
States and Transitions	No state and transition model is available for this ecological site.

The plant community on this site has been dominated by quaking aspen (*Populus tremuloides*) in the overstory with a shrub understory of Gambel oak (*Quercus gambelii*) and mountain snowberry (*Symphoricarpos oreophilus*) since study establishment in 2014 (Table 14R-33.12, Table 14R-33.13, Photos). The herbaceous understory has remained diverse and abundant. Perennial grasses, primarily the introduced species smooth brome (*Bromus inermis*), intermediate wheatgrass (*Thinopyrum intermedium*), Kentucky bluegrass (*Poa pratensis*), and orchardgrass (*Dactylis glomerata*), have provided a majority of the herbaceous cover, although perennial forbs contributed significant cover in 2014 (Table 14R-33.7, Table 14R-33.10, Table 14R-33.11). This site will likely remain in this or a similar state in future years without a major disturbance.

### Directions to Site

From Gooseberry Guard Station, travel north for 1.2 miles to Beef Basin Road and take the left fork of the road. Drive for 0.2 miles to Forest Service Road #5147 and again take the left fork. After 0.5 miles the site will be on the left (south) side of the road. Study 14R-33 is on the north side of the road.

**Site Information**

Land Ownership	Federal
Land Administrator	USFS
Allotment	GOOSEBERRY
Elevation	8,766ft (2,672m)
Aspect	East
Slope	2-5%
Sample Dates	08/26/2014, 08/25/2020

**Table 14R-34.1 Disturbance History.** Recorded history of major disturbances.

Treatment/Disturbance	Name	WRI DB#	Date	Size (acres)
Fire - Prescribed	La Sal/Abajo Prescribed Fire FY20	4882	Summer 2019	21732
Fire - Prescribed	La Sal/Abajo Prescribed Fire FY21 (Proposed)	5218	Fall 2020	25812

**Wildlife Habitat and Vegetation History****Table 14R-34.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season
Mule Deer	crucial	summer
Rocky Mountain Elk	crucial	summer

**Table 14R-34.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2014	Quaking Aspen/Snowberry	NA
2020	Quaking Aspen/Snowberry	NA

**Site Notes**

This site is being read in conjunction with 14R-33 which is inside an enclosure.

**Site Potential**

1981 - 2010 Average Annual Precipitation	26 inches
NRCS Ecological Site	High Mountain Loam (Aspen)
NRCS Ecological Site #	R048AY506UT
States and Transitions	No state and transition model is available for this ecological site.

Since study establishment in 2014, this site has remained dominated by quaking aspen (*Populus tremuloides*) in the overstory and mountain snowberry (*Symphoricarpos oreophilus*) in the understory, although cover of both species decreased slightly following a fire in 2019. Other shrubs have been present, but have contributed much less cover (Table 14R-34.1, Table 14R-34.12, Table 14R-34.13). The perennial herbaceous understory has remained abundant with a diverse number of grasses and forbs, although cover decreased between 2014 and 2020. The introduced perennial grass species bulbous bluegrass (*Poa bulbosa*) has been observed throughout the duration of the study, but with low abundance (Table 14R-34.7, Table 14R-34.10, Table 14R-34.11). This study site will likely remain in this or a similar state in future sample years without further disturbance.

500ft  
Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)  
Standard

**Directions to Site**

From the Gooseberry Guard Station on Elk Ridge, drive north for 1.3 miles on Gooseberry Road, then turn left onto Sweet Alice Road. Proceed for 3 miles, where there will be an intersection with Beef Basin Road to the right. Continue straight on Sweet Alice Road for 10.2 miles. There will be a pullout with a ring tank for cattle on the left (south) side of the road: park here. The study site is about 110 paces at an azimuth of 190 degrees magnetic from the ring tank.

**Site Information**

Land Ownership	Federal
Land Administrator	BLM
Allotment	INDIAN CREEK
Elevation	7,900ft (2,408m)
Aspect	North
Slope	5-7%
Sample Dates	08/22/2017, 08/24/2020

Year	Vegetation Type	Woodland Succession
2017	Manzanita	Phase I
2020	Manzanita	Phase I

**Site Notes**

No Notes

**Site Potential**

1981 - 2010 Average Annual Precipitation	16 inches
NRCS Ecological Site	Upland Sand (Mountain Big Sagebrush)
NRCS Ecological Site #	R035XY307UT
States and Transitions	No state and transition model is available for this ecological site.

The vegetation component on this site has been dominated by greenleaf manzanita (*Arctostaphylos patula*) since study establishment in 2017, although preferred browse species such as Utah serviceberry (*Amelanchier utahensis*), mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*), and antelope bitterbrush (*Purshia tridentata*) have also been present to a lesser extent (Table 14R-38.12, Table 14R-38.13). Twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) were scattered throughout the area in 2017, but many trees were removed by a 2018-2019 bullhog treatment. However, pinyon was observed in low amounts in point-quarter density in 2020, indicating that there may be potential for infilling over time (Table 14R-38.1, Table 14R-38.12, Table 14R-38.14). The herbaceous understory has been mainly composed of native perennial grasses and forbs and has remained moderately diverse. Cover of the understory has remained low following the bullhog treatment, but will likely increase as time since treatment passes (Table 14R-38.7, Table 14R-38.10, Table 14R-39.11).

## DUCK LAKE - STUDY NO. 14R-39

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Poison Canyon SE; Township 34S, Range 19E, Section 24  
NAD 83 UTM ZONE 12, 607642 East 4185622 North

### Transect Information

Browse Tag # (0' Stake)	533
Transect Bearing	248° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From the Gooseberry Guard Station on Elk Ridge, proceed south for approximately 0.8 miles to Duck Lake (there will be a sign): park here. The study is approximately 90 paces from the road at an azimuth of 243 degrees magnetic, inside an exclosure and slightly downhill.

**Site Information**

2017	Quaking Aspen/Perennial Grass	Phase I
2020	Quaking Aspen/Perennial Grass	Phase I

**Site Notes**

This study site is located inside a total enclosure which was constructed in 2015 to exclude big game and livestock (WRI Project #3004).

**Site Potential**

1981 - 2010 Average Annual Precipitation	25 inches
NRCS Ecological Site	High Mountain Loam (Aspen)
NRCS Ecological Site #	R048AY506UT
States and Transitions	No state and transition model is available for this ecological site.

Quaking aspen (*Populus tremuloides*) and mountain snowberry (*Symphoricarpos oreophilus*) have been the dominant tree and shrub species since study establishment in 2017; lesser amounts of other browse species including Utah serviceberry (*Amelanchier utahensis*) and Gambel oak (*Quercus gambelii*) have also been present (Table 14R-39.12, Table 14R-39.13). The herbaceous understory has been abundant (Table 14R-39.7), with a majority of the cover being contributed by the introduced perennial grasses orchardgrass (*Dactylis glomerata*) and Kentucky bluegrass (*Poa pratensis*) (Table 14R-39.10). Forbs have contributed much less cover in comparison, with the native perennial forb Nevada pea (*Lathyrus lanszwertii*) as the most abundant species (Table 14R-39.11). Although a majority of the ponderosa pine (*Pinus ponderosa*) trees were removed by a logging treatment (Table 14R-39.1), point-quarter data reveals that they were still present in low density during the sample period. Rocky Mountain juniper (*Juniperus osteosperma*) has also been observed: this indicates that there may be potential for conifer infilling in the future (Table 14R-39.14).

**Table 14R-40.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2017	Ponderosa Pine/Mountain Snowberry	NA
2020	Ponderosa Pine/Mountain Snowberry	NA

**Site Notes**

This study site is located inside a total enclosure which was constructed in 2015 to exclude big game and livestock (WRI Project #3004). A buck mule deer and deer beds were seen on site in 2017.

**Site Potential**

1981 - 2010 Average Annual Precipitation	26 inches
NRCS Ecological Site	High Mountain Loam (Aspen)
NRCS Ecological Site #	R048AY506UT
States and Transitions	No state and transition model is available for this ecological site.

Ponderosa pine (*Pinus ponderosa*) and mountain snowberry (*Symphoricarpos oreophilus*) have dominated this site since study establishment in 2017 with other shrub species as minor components (Table 14R-40.12, Table 14R-40.13). Many younger quaking aspen (*Populus tremuloides*) plants are present as of 2020, and cover may increase over time as the stand matures (Table 14R-40.13a). The herbaceous understory has remained diverse and abundant. Perennial grasses including Columbia needlegrass (*Achnatherum nelsonii*) and Thurber's fescue (*Festuca thurberi*) have provided a majority of the herbaceous cover in both sample years (Table 14R-40.7, Table 14R-40.10). Most forb cover has been contributed by native perennial species, namely common yarrow (*Achillea millefolium*) and Nevada pea (*Lathyrus lanszwertii*) (Table 14R-40.11). Although a selective logging treatment prior to study establishment (Table 14R-40.1) removed some of the ponderosa pine trees, their presence post-treatment (Table 14R-40.14) indicates that this site may become conifer-encroached in the future.

## BLACK MOUNTAIN - STUDY NO. 22R-5

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Black Ridge SW; Township 29S, Range 7W, Section 24  
NAD 83 UTM ZONE 12, 360424 East 4236501 North

**Transect Information**

Browse Tag # (0' Stake)	42
Transect Bearing	2° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

**Directions to Site**

From Beaver, drive east on 200 North. Holdaway Lane (1515 East) comes in from the south: turn onto this road, drive for 0.9 miles, and turn left. Travel 1 mile to the power lines. At the power lines, turn south and travel 0.1 miles to a fork. Go left at the fork and proceed 0.4 miles to a witness post on the left (north) side of the road. The 0-foot stake is 12 paces from the witness post at 4 degrees magnetic and is marked with browse tag #42.

**Site Information**

Land Ownership	Private
Land Administrator	Private
Allotment	LEE SPRINGS
Elevation	6,350ft (1,935m)

2007	Wyoming Big Sagebrush	Phase I
2012	Wyoming Big Sagebrush/Perennial Grass	Phase I
2016	Wyoming Big Sagebrush/Perennial Grass	Phase I
2020	Wyoming Big Sagebrush/Perennial Grass	Phase I

**Site Notes**

The study is located approximately one mile southeast of Beaver within a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) flat.

**Soils****Table 22R-05.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Clay Loam	7.4	41.0	31.5	27.5	2.2	5.6	163.2	0.7	07/20/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	13 inches
NRCS Ecological Site	Upland Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R028AY309UT
States and Transitions	No state and transition model is available for this ecological site.

Since study establishment in 2004, the dominant browse species on this site has been Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) (Table 22R-05.12). The seeding success of forage kochia (*Bassia prostrata*) appears to be brief with a flush of mature plants appearing in 2007, but density of forage kochia significantly decreased with very few plants being sampled in 2020 (Table 22R-05.13). The herbaceous understory was initially lacking in cover, but perennial grasses increased and became a co-dominant vegetation component in 2012 (Table 22R-05.7, Table 22R-05.10). Although twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) were sparsely scattered throughout the site in 2004, cover decreased after a lop and scatter treatment between 2004 and 2007 (Table 22R-05.1, Table 22R-05.12). However, density data indicates that trees have been present in all sample years, suggesting that there may be the potential for infilling in the future (Table 22R-05.14).

**Trend Summary Tables****Table 22R-05.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Greenville Bench NE; Township 30S, Range 7W, Section 17  
NAD 83 UTM ZONE 12, 354091 East 4229693 North

### Transect Information

Browse Tag # (0' Stake)	Not Available
Transect Bearing	350° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

From exit 109 off of I-15, go west on the overpass toward a Chevron Station. From the Chevron Station, travel south on 600 West for 0.7 miles to the motocross track and turn left. Stay to the left and travel south for 2 miles. Turn right and drive 1 mile to another road that comes in from the right. Turn right (west) here and travel 0.4 miles to a drainage. Stop here and walk 200 paces north, down the drainage, to the baseline off to the left. The 0-foot stake is marked with browse tag #188.

Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 22R-06.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2004	Pinyon-Juniper	Phase III
2007	Annual-Perennial Grass	Phase I
2012	Perennial Grass	Phase I
2016	Mixed Shrub/Perennial Grass	Phase I
2020	Annual-Perennial Grass/Mixed Shrub	Phase I

**Site Notes**

This study is located approximately five miles south of Beaver within a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) community invaded by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*).

**Soils**

**Table 22R-06.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Sandy Loam	7.3	61.7	20.5	17.8	2.5	6.8	99.2	0.6	07/20/2004

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Upland Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R028AY309UT
States and Transitions	No state and transition model is available for this ecological site.

When established in 2004, this study site was dominated by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) and was considered to be within Phase III of woodland succession (Table 22R-06.4, Table 22R-06.12). When sampled in 2007 after the bullhog and seeding treatment (Table 22R-06.1), tree cover decreased significantly and the site transitioned to an annual-perennial grassland. Cover of annual grass decreased in 2012 and the understory remained dominated by perennial grasses until 2020 when the understory was dominated by the introduced annual grass species cheatgrass (*Bromus tectorum*) (Table 22R-06.7, Table 22R-06.10). Total preferred browse cover in this community has increased each sample year since treatment, and Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) has steadily increased in cover and density over the duration of the study. Cover and density of juniper has increased each year between treatments in 2004 and 2018. In 2020 however, density for juniper decreased significantly while cover increased from the previous sample year (Table 22R-06.12, Table 22R-06.13). This may indicate that woodland succession remains dynamic and the community may be infilled in the future.

**Trend Summary Tables**

**Table 22R-06.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Quadrat Cover (%)			Line-intercept Cover (%)		
	Preferred Shrub	Other Shrub	Tree	Preferred Shrub	Other Shrub	Tree

## SPRY SAGEBRUSH RESTORATION - STUDY NO. 22R-16

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Fremont Pass SE; Township 32S, Range 5W, Section 16  
NAD 83 UTM ZONE 12, 375116 East 4209324 North

### Transect Information

Browse Tag # (0' Stake)	107
Transect Bearing	76° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

### Directions to Site

From the junction of State Route 20 and US-89 north of Panguitch, proceed north to mile marker 143 and drive 0.9 miles to a road on the left. From the cattle guard, drive 2.7 miles (past a second cattle guard) to a fork and stay left. From the fork, go 0.2 miles to another fork, go right, and proceed 0.1 miles to the witness post on the right (east) side of the road. From the witness post, walk 6 paces to the 0-foot stake at 98 degrees magnetic. The 0-foot stake is marked with browse tag #107.

Year	Vegetation Type	Woodland Succession
2008	Mountain Big Sagebrush/Pinyon-Juniper/Perennial Grass	Phase II
2011	Mountain Big Sagebrush/Perennial Grass	Phase I
2015	Mountain Big Sagebrush/Perennial Grass	Phase I
2020	Mountain Big Sagebrush/Perennial Grass	Phase I

**Site Notes**

No Notes

**Site Potential**

1981 - 2010 Average Annual Precipitation	14 inches
NRCS Ecological Site	Upland Stony Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XB336UT
States and Transitions	No state and transition model is available for this ecological site.

When established in 2008, this study site was dominated by mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) with twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) trees scattered throughout the area (Table 22R-16.12, Photos). A lop and scatter treatment (Table 22R-16.1) removed much of the pinyon and juniper, and both density and cover of mountain big sagebrush have increased steadily in each subsequent sample year (Table 22R-16.12, Table 22R-16.13). The herbaceous understory has generally remained stable over the sample period (Table 22R-16.7) and has been dominated by the introduced perennial grass species crested wheatgrass (*Agropyron cristatum*) (Table 22R-16.10). Forbs have remained fairly diverse overall, yet have not been very abundant (Table 22R-16.11). Barring infilling by pinyon and juniper or a major disturbance, it is likely that this site will continue to remain in this or a similar state in future sample years.

## SOUTH NARROWS - STUDY NO. 23R-7

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Parker Knoll SW; Township 29S, Range 2W, Section 11  
NAD 83 UTM ZONE 12, 413604 East 4239187 North

**Transect Information**

Browse Tag # (0' Stake)	191
Transect Bearing	336° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

**Directions to Site**

From State Route 62 south of Koosharem, there will be a road coming in from the west 0.5 miles south of mile marker 22. Turn onto this road, pass through a gate, and travel 0.7 to another fence with a gate. From here, walk about 1,000 feet at 356 degrees magnetic to the 0-foot stake that is marked with browse tag #191.

**Site Potential**

1981 - 2010 Average Annual Precipitation	9 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R028AY220UT
States and Transitions	A defined state and transition model is available.

This study site has remained in poor condition and has been dominated by annual forbs since establishment in 2004. Cover of perennial grasses and forbs has remained low and could be related to rabbit grazing, as quadrat frequency of pellets indicates high use (Table 23R-07.7, Table 23R-07.9, Table 23R-07.10, Table 23R-07.11). Browse is extremely limited and all line-intercept cover has been contributed by Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) (Table 23R-07.12). This site is expected to remain in a degraded state if current conditions persist. The vegetation on this study site is not described by the current state and transition model, but the site is likely in a phase similar to the Annual non-native species Community Phase within the Annual State (Jornada, 2020).

## BROWNS CANYON DRILL - STUDY NO. 23R-8

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Greenwich SE; Township 27S, Range 1W, Section 32  
NAD 83 UTM ZONE 12, 418604 East 4253004 North

### Transect Information

Browse Tag # (0' Stake)	54
Transect Bearing	170° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

Travel south of Greenwich on State Route 62. From mile marker 31, travel 0.1 miles north to a road that comes in from the west. Turn onto this road and travel 0.5 miles to a road that comes in from the left (south). Turn left onto this road and drive 100 feet to a witness post on the right-hand (west) side of the road. From the witness post, walk 45 paces at 255 degrees magnetic to the 0-foot stake that is marked with browse tag #54.

**Site Information**

#### Site Notes

This study is located approximately one-half mile southwest of Greenwich within a treated Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) flat.

#### Soils

**Table 23R-08.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	% sand	% silt	% clay	% OM	PPM P	PPM K	ds/m	Sample Date
Sandy Clay Loam	7.4	51.0	26.8	22.2	1.1	15.7	249.6	0.7	08/05/2004

#### Site Potential

1981 - 2010 Average Annual Precipitation	9 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R028AY220UT
States and Transitions	A defined state and transition model is available.

Since establishment in 2004, this study site has remained dominated by forage kochia (*Bassia prostrata*) with few other shrub species present (Table 23R-08.12, Table 23R-08.13). Annual forbs, mainly prickly Russian thistle (*Salsola tragus*), were a co-dominant component in 2004, but cover has since decreased. Perennial grasses and forbs have remained rare (Table 23R-08.7, Table 23R-08.10, Table 23R-08.11). Without a major disturbance, this site is expected to remain in this or a similar state in future sample years.

**Trend Summary Tables****Table 23R-08.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Mule Deer	crucial	winter	
Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 23R-11.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2006	Wyoming Big Sagebrush	No Encroachment
2011	Annual Forb/Wyoming Big Sagebrush	No Encroachment
2016	Wyoming Big Sagebrush	No Encroachment
2020	Wyoming Big Sagebrush	No Encroachment

**Site Notes**

This study is located approximately one mile northwest of Greenwich within a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) flat that is north of Box Creek.

**Soils****Table 23R-11.5 - Soil Analysis Data.** List of chemical and textural soil characteristics determined by laboratory analysis.

Texture	pH	%sand	%silt	%clay	%OM	PPM P	PPM K	ds/m	Sample Date
Loam	7.4	46.0	29.1	24.9	1.6	15.7	163.2	0.6	07/26/2006

**Site Potential**

1981 - 2010 Average Annual Precipitation	10 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R028AY220UT
States and Transitions	A defined state and transition model is available.

The vegetation on this site has existed as a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) dominated community type since study establishment in 2006; other shrubs are present in much lower amounts (Table 23R-11.12, Table 23R-11.13). In 2011, the introduced annual forbs tall tumbled mustard (*Sisymbrium altissimum*) and prickly Russian thistle (*Salsola tragus*) contributed 15% cover and were a co-dominant site component, but have not been abundant in other sample years. Perennial forbs and grasses, while somewhat diverse, have remained rare (Table 23R-11.7, Table 23R-11.10, Table 23R-11.11).

Year	Vegetation Type	Woodland Succession
2020	Wyoming Big Sagebrush	Phase I transitioning to Phase II

**Site Notes**

No Notes

**Site Potential**

1981 - 2010 Average Annual Precipitation	12 inches
NRCS Ecological Site	Upland Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R034XY306UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2020, the vegetation on this site was a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) community type with Utah juniper (*Juniperus osteosperma*) actively encroaching (Table 23R-15.6, Table 23R-15.12, Table 23R-15.14, Photos). As is characteristic of Phase II of woodland succession (Table 23R-15.4), the sagebrush population was decadent with few young and mature plants contributing to the population (Table 23R-15.13). The herbaceous understory was low in diversity with the introduced annual grass species cheatgrass (*Bromus tectorum*) as the dominant understory species (Table 23R-15.7, Table 23R-15.10). With the removal or reduction of juniper, it is likely that the age structure for sagebrush will diversify and cover and density will also increase. Furthermore, it is expected that the vegetative understory will also respond with an increase in abundance and diversity.

## PANGUITCH EAST BENCH HARROW - STUDY NO. 24R-6

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Blind Spring Mountain; Township 33S, Range 4W, Section 31  
NAD 83 UTM ZONE 12, 382044 East 4195732 North

### Transect Information

Browse Tag # (0' Stake)	41
Transect Bearing	255° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

Travel north of Panguitch on US-89 to mile marker 134. Continue 0.8 miles north of the mile marker to a road that comes in from the right (east). Turn onto this road and travel 1.2 miles to an intersection. Turn left and drive 1.6 miles to a 90 degree turn. Continue 3.9 miles to a road that comes in from the left (north). Turn left here and travel 0.2 miles to two witness posts on the left (west) side of the road that are right next to each other. From the witness posts, walk 82 paces at 266 degrees magnetic to the 0-foot stake that is marked with browse tag #41.

**Site Potential**

1981 - 2010 Average Annual Precipitation	11 inches
NRCS Ecological Site	Semidesert Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R047XB222UT
States and Transitions	No state and transition model is available for this ecological site.

This study site has existed as a Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*) dominated plant community since establishment in 2004. Decadence was high in the 2004 sample year and the site was dixe harrowed and seeded that fall (Table 24R-06.1). Sagebrush cover exhibited an initial decrease, but has since surpassed pre-treatment levels. In addition, decadence has remained low following treatment (Table 24R-06.12, Table 24R-06.13). Perennial grasses, mainly blue grama (*Bouteloua gracilis*), increased in cover and became a co-dominant component in 2012. However, blue grama cover decreased significantly in 2020 (Table 24R-06.7, Table 24R-06.10). Although no trees have been recorded in the data, photos reveal that there is at least one on the site and a woodland on one side, indicating that this site has the potential for future encroachment (Table 24R-06.12, Table 24R-06.13, Photos).

## SAND LEDGES - STUDY NO. 25R-9

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Water Creek Canyon N; Township 24S, Range 1W, Section 15  
NAD 83 UTM ZONE 12, 422207 East 4286724 North

**Transect Information**

Browse Tag # (0' Stake)	Not Available
Transect Bearing	100° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	Standard

**Directions to Site**

From Highway 24, drive 1.4 miles to a junction. Turn left, travel 1.4 miles, then turn right. Drive for 2.1 miles to a witness post on the right-hand (south) side of the road (there are two roads that climb to the top of the hill and both roads reach the site). From the witness post, walk 20 paces at 145 degrees magnetic to the 0-foot stake.

**Table 25R-09.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2012	Pinyon-Juniper/Mountain Big Sagebrush-Bitterbrush	Phase II
2016	Mountain Big Sagebrush-Bitterbrush/Annual Grass	Phase I
2020	Perennial Grass	Phase I

**Site Notes**

This study is located approximately five miles east of Glenwood within an old twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) chaining.

**Site Potential**

1981 - 2010 Average Annual Precipitation	16 inches
NRCS Ecological Site	Mountain Stony Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XB462UT
States and Transitions	No state and transition model is available for this ecological site.

In 2012, this study site was dominated by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) with mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) and antelope bitterbrush (*Purshia tridentata*) in the shrub understory. A lop and scatter project later that year removed many of the trees, and cover of sagebrush and bitterbrush had increased as of 2016. However, a wildfire in 2018 removed much of the shrub and remaining tree components from the community (Table 25R-09.1, Table 25R-09.12, Table 25R-09.13). Although initially sparse, the herbaceous understory was abundant in 2016, but much of the cover was contributed by the introduced annual grass species cheatgrass (*Bromus tectorum*). In 2020 following the wildfire, the introduced perennial grass intermediate wheatgrass (*Thinopyrum intermedium*) was the dominant species (Table 25R-09.7, Table 25R-09.10).

## PARKER FRONT - STUDY NO. 25R-10

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

Parker Knoll NE; Township 28S, Range 1W, Section 41  
NAD 83 UTM ZONE 12, 421398 East 4245609 North

### Transect Information

Browse Tag # (0' Stake)  
Transect Bearing  
Length  
Belt Placement  
Belt Marker Placement

597  
356° magnetic  
500ft  
Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (95ft), Line 5 (71ft)  
Belt 3: 5ft

### Directions to Site

Travel south on State Route 62 from Greenwich for 4.2 miles. Turn east and drive for 1.6 miles, crossing Otter Creek. The road will fork: stay to the left and drive for another 0.7 miles. The road will fork again: keep left and continue for 0.2 miles. The transect will be on the north side of the road.

**Wildlife Habitat and Vegetation History****Table 25R-10.3 - Wildlife Seasonal Habitat.** UDWR wildlife habitat and seasonality.

Species	Habitat	Season	Brood/Young Rearing
Mule Deer	crucial	winter	
Rocky Mountain Elk	substantial	winter	
Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 25R-10.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2013	Pinyon-Juniper	Phase II
2016	Mountain Big Sagebrush/Perennial Grass	Phase I
2020	Mountain Big Sagebrush/Perennial Grass	Phase I

**Site Notes**

A small number of old deer shed antlers were found near the site in 2013.

**Site Potential**

1981 - 2010 Average Annual Precipitation	14 inches
NRCS Ecological Site	Mountain Stony Loam (Mountain Big Sagebrush)
NRCS Ecological Site #	R047XB462UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2013, this site was dominated by twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) with moderately robust populations of mountain big sagebrush (*Artemisia tridentata* ssp. *vaseyana*) and antelope bitterbrush (*Purshia tridentata*) in the understory. Tree and bitterbrush cover decreased following a chaining and seeding treatment (Table 25R-10.1), and the dominant browse species was mountain big sagebrush in 2016 and 2020 (Table 25R-10.12). Herbaceous cover increased following the treatment; perennial grasses were a co-dominant site component in 2016 and 2020, with squirreltail (*Elymus elymoides*) and Indian ricegrass (*Achnatherum hymenoides*) providing much of the cover (Table 25R-10.7, Table 25R-10.10). Although juniper trees were not initially a major component of the tree community, juniper have reestablished with density returning to pretreatment levels. This likely indicates that woodland succession remains dynamic on the site, and future infilling could pose a treat to understory diversity and abundance (Table 25R-10.12, Table 25R-10.14).

**Trend Summary Tables****Table 25R-10.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

Year	Vegetation Type	Woodland Succession
2013	Pinyon-Juniper	Phase III
2016	Wyoming Big Sagebrush/Annual-Perennial Forb	Phase I
2020	Wyoming Big Sagebrush	Phase I

**Site Notes**

No Notes

**Site Potential**

1981 - 2010 Average Annual Precipitation	11 inches
NRCS Ecological Site	Upland Loam (Wyoming Big Sagebrush)
NRCS Ecological Site #	R047XA312UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2013, this site was a Phase III twoneedle pinyon (*Pinus edulis*) and Utah juniper (*Juniperus osteosperma*) woodland with a mostly depauperate understory (Table 25R-11.4). Most of the tree cover was removed by a bullhog treatment the following winter (Table 25R-11.1), and in 2016 and 2020 the main browse component was Wyoming big sagebrush (*Artemisia tridentata* ssp. *wyomingensis*). In 2020, sagebrush density increased nearly three-fold from 2016. In addition, sagebrush cover has had a marked increase each sample year (Table 25R-11.12, Table 25R-11.13). Grass cover has remained low throughout the duration of the study. In 2016 annual and perennial forbs filled the interspaces and were co-dominant site components, but they were a minor component in the 2020 sample year (Table 25R-11.7, Table 25R-11.11). Pinyon and juniper were observed in 2016 in low amounts, but in 2020 juniper density increased and surpassed pretreatment measurements. However, juniper cover has remained low which indicates that trees remain small (Table 25R-11.12, Table 25R-11.13). Woodland succession remains dynamic in this community, and future infilling will need continued inputs for maintenance of this sagebrush community.

### Directions to Site

Go east from Salina on I-70 for approximately 37.5 miles to the rest area. From the exit, go 2.4 miles east on the frontage road to the junction with State Route (SR) 72. Travel south on SR-72 for approximately 12.8 miles to a pullout on the east side of the highway. The study site is approximately 300 feet east of the highway.

**Site Information**

Year	Vegetation Type	Woodland Succession
2016	Rubber Rabbitbrush	No Encroachment
2020	Perennial Grass	No Encroachment

**Site Notes**

The herbaceous understory was observed to have been heavily grazed in 2016.

**Site Potential**

1981 - 2010 Average Annual Precipitation	15 inches
NRCS Ecological Site	Semiwet (Fresh Meadow)
NRCS Ecological Site #	R047XB004UT
States and Transitions	No state and transition model is available for this ecological site.

When established in 2016, this study site was dominated by rubber rabbitbrush (*Ericameria nauseosa*) with no other browse species present (Table 25R-12.12, Table 25R-12.13). The understory was plentiful, but not diverse; a majority of the cover was contributed by the perennial grass Kentucky bluegrass (*Poa pratensis*), sedges (*Carex sp.*), and rushes (*Juncus sp.*) (Table 25R-12.7, Table 25R-12.10). Following the mower and herbicide treatment (Table 25R-12.1), cover and density of rubber rabbitbrush decreased substantially. Despite the removal of rabbitbrush, however, more desirable browse and herbaceous species have remained depreciated as of 2020 (Table 25R-12.10, Table 25R-11.12, Table 25R-12.13).

## HATCH BENCH 2 - STUDY NO. 27R-24

### Location Information

USGS 7.5 min Map Info  
GPS (0' Stake)

George Mountain NE; Township 37S, Range 5W, Section 09  
NAD 83 UTM ZONE 12, 373680 East 4163111 North

### Transect Information

Browse Tag # (0' Stake)	Not Available
Transect Bearing	190° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

### Directions to Site

From the town of Hatch, drive south for 1.2 miles on US 89. Turn left (east) and drive for 0.3 miles at which point there will be a "T" in the road. Take the road to the left and proceed for 0.2 miles, where there will be a road that cuts back to the right. Take this road and drive for 0.1 miles to where the road forks. Stay right and continue for another 0.1 miles, arriving at a cattle guard. Cross the cattle guard, pass through the gate, and drive for 1.7 miles (there will be another cattle guard toward the end). The study will be on the right side of the road and to the southwest.

Mule Deer	crucial	summer	
Greater Sage-Grouse	occupied	year-long	brood-rearing

**Table 27R-24.4 - Vegetation History.** The dominant vegetation type(s) and phase of woodland succession (Tausch, Miller, Roundy, & Chambers, 2009).

Year	Vegetation Type	Woodland Succession
2013	Pinyon-Juniper/Black Sagebrush	Phase II
2016	Black Sagebrush	Phase I
2020	Black Sagebrush	Phase I

**Site Notes**

There is a fence that runs along the 100-foot side of the belts parallel to the lines.

**Site Potential**

1981 - 2010 Average Annual Precipitation	14 inches
NRCS Ecological Site	Upland Loam (Black Sagebrush)
NRCS Ecological Site #	R047XB309UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2013, the vegetation on this site was a mixed stand of two-needle pinyon (*Pinus edulis*), Rocky Mountain juniper (*Juniperus scopulorum*), and black sagebrush (*Artemisia nova*). Tree cover was reduced by a lop and scatter treatment in 2014 (Table 27R-24.1), and the main browse species in 2016 and 2020 was black sagebrush (Table 27R-24.12). Although the herbaceous understory remains diverse with cover increasing slightly in 2020, much of the understory cover is contributed by the perennial grass species Indian ricegrass (*Achnatherum hymenoides*) and squirreltail (*Elymus elymoides*). Forbs have been diverse, but with the exception of the 2016 sample year, have remained scarce (Table 27R-24.7, Table 27R-24.10, Table 27R-24.11). Both pinyon and juniper were observed in small amounts in 2020 and could infill the site in future (Table 27R-24.12, Table 27R-24.13, Table 27R-24.14).

## SOUTH CANYON 2 - STUDY NO. 28R-9

**Location Information**

USGS 7.5 min Map Info  
GPS (0' Stake)

Hatch NE; Township 35S, Range 5W, Section 34  
NAD 83 UTM ZONE 12, 376288 East 4176250 North

**Transect Information**

Browse Tag # (0' Stake)	70
Transect Bearing	298° magnetic
Length	500ft
Belt Placement	Line 1 (11ft), Line 2 (34ft), Line 3 (59ft), Line 4 (71ft), Line 5 (95ft)
Belt Marker Placement	No Rebar

**Directions to Site**

From Panguitch, drive west on US-89 to mile marker 123. Continue 0.9 miles to a dirt road on the left (west) with a cattle guard. Turn left and drive 1 mile to the witness post on the left (south) side of the road. From the witness post, walk 138 paces at 210 degrees magnetic to the 0-foot stake which is marked with browse tag #70; the site is across a drainage and on top of a ridge located south of the road.

Loam	6.5	45.1	33.1	21.8	2.4	15.2	150.4	0.5	07/07/2005

**Site Potential**

1981 - 2010 Average Annual Precipitation	13 inches
NRCS Ecological Site	Upland Gravelly Loam (Black Sagebrush)
NRCS Ecological Site #	R047XB306UT
States and Transitions	No state and transition model is available for this ecological site.

When the study was established in 2005, the plant community was dominated by two-needle pinyon (*Pinus edulis*) and was considered to be in Phase III of woodland succession (Table 28R-09.4, Table 28R-09.12); shrubs were rare (Table 28R-09.6). After a bullhog and seeding treatment in the fall of 2012 (Table 28R-09.1), pinyon decreased and became a minor vegetation component (Table 28R-09.14). Shrubs have remained scarce in the post-treatment sample period, with black sagebrush (*Artemisia nova*) as the dominant species (Table 28R-09.12). The herbaceous understory was sparse prior to the bullhog and seeding treatment. Following treatment, however, the perennial grass species blue grama (*Bouteloua gracilis*) and squirreltail (*Elymus elymoides*) became the dominant vegetation component (Table 28R-09.7, Table 28R-09.10). Shrubs will likely increase as treatment matures.

**Trend Summary Tables****Table 28R-09.6 - Shrub/Tree Summary.** Average modified Daubenmire quadrat and line intercept cover by year for shrubs/trees

## APPENDIX A - VEGETATION TYPE

## VEGETATION COMMUNITY TYPE CLASSIFICATION--

Vegetation Type Code	Vegetation Community Type Name*	Description
ANN GRASS	Annual Grass	Annual grasses provide the dominant vegetation cover.
PER GRASS	Perennial Grass	Perennial grasses provide the dominant vegetation cover.
ANN-PER GRASS	Annual-Perennial Grass	Mixture of Annual and Perennial grass species provide the dominant vegetation cover.
ANN GRASS-FORB	Annual Grass-Forb	Mixture of Annual grass and forb species provide the dominant vegetation cover.
PER GRASS-FORB	Perennial Grass-Forb	Mixture of Perennial grass and forb species provide the dominant vegetation cover.
ANN FORB	Annual Forb	Annual forbs provide the dominant vegetation cover
PER FORB	Perennial Forb	Perennial forbs provide the dominant vegetation cover
ANN-PER FORB	Annual-Perennial Forb	Mixture of Annual and Perennial forb species provide the dominant vegetation cover.
WEED	Annual-Perennial Weed	Annual and/or Perennial weedy species provide the dominant vegetation cover.
WET MEADOW	Wet Meadow	Riparian vegetation species provide the dominant vegetation cover
DRY MEADOW	Dry Meadow	High elevation subalpine meadow
RIPAR	Riparian	Riparian vegetation species provide the dominant vegetation cover.
ALP GRASS	Alpine Grass	Grass or grass-like species provide the dominant vegetation cover
ALP FORB	Alpine Forb	Forb species provide the dominant vegetation cover
ALP SHRUB	Alpine Shrub	Alpine shrub species provide the dominant vegetation cover
ALP MIX	Alpine-Mixed	Mixture of grass, forb, or shrub species provide the dominant vegetation cover
ARTRT	Basin Big Sagebrush	Major component of the site (typically >5% cover).
ARTRV	Mountain Big Sagebrush	Major component of the site (typically > 5% cover).
ARTRW	Wyoming Big Sagebrush	Major component of the site (typically >5% cover).
ARAR	Low Sagebrush	Major component of the site (typically >5% cover).
ARCA	Silver Sagebrush	Major component of the site (typically >5% cover).
ARNO	Black Sagebrush	Major component of the site (typically >5% cover).
ARSP	Bud Sagebrush	Major component of the site (typically >5% cover).
ARFR	Fringed Sagebrush	Major component of the site (typically >5% cover).
CHNA	Rubber Rabbitbrush	Major component of the site (typically >5% cover).
CHPA	Parry Rabbitbrush	Major component of the site (typically >5% cover).
CHVI	Low Rabbitbrush	Major component of the site (typically >5% cover).
GUSA	Broom Snakeweed	Major component of the site (typically >5% cover).
SAVE	Black Greasewood	Major component of the site (typically >5% cover).
CELA	Winterfat	Major component of the site (typically >5% cover).
ATCO	Shadscale	Major component of the site (typically >5% cover).
ATCA	Fourwing Saltbush	Major component of the site (typically >5% cover).
GRSP	Spiny Hopsage	Major component of the site (typically >5% cover).
MSDS	Mixed Salt Desert Shrub	Mixture of one or more Salt Desert species (ATCO, ATCA, GRSP, etc.) with no one species expressing dominance.
LARRE	Creosote Bush	Major component of the site (typically >5% cover).
CORA	Blackbrush	Major component of the site (typically >5% cover).
PRFA	Desert Almond	Major component of the site (typically >5% cover).
EPHED	Ephedra	Major component of the site (typically >5% cover).
QUGA	Gambel Oak	Major component of the site (typically >5% cover).

Vegetation Type Code	Vegetation Community Type Name*	Description
QUTU	Live Oak	Major component of the site (typically >5% cover).
SYOR	Snowberry	Major component of the site (typically >5% cover).
AMAL	Serviceberry	Major component of the site (typically >5% cover).
PUTR	Bitterbrush	Major component of the site (typically >5% cover).
PUGL	Desert Bitterbrush	Major component of the site (typically >5% cover).
ARCT2	Manzanita	Major component of the site (typically >5% cover).
CEMOM	True Mountain Mahogany	Major component of the site (typically >5% cover).
CELEL	Curlleaf Mountain Mahogany	Major component of the site (typically >5% cover).
COMES	Stansbury Cliffrose	Major component of the site (typically >5% cover).
KOPR	Forage Kochia	Major component of the site (typically >5% cover).
TAMARIX	Tamarix	Major component of the site (typically >5% cover).
MMB	Mixed Mountain Brush	Mixture of one or more Mountain brush species (ARTRV, AMAL, CEMOM, etc.) with no one species expressing dominance.
MB	Mixed Shrub	Mixture of various shrub species with none expressing dominance.
CHAPARRAL	Chaparral	Mixture of fire tolerant shrub species.
JUNIPER	Juniper	Major component of the site (Phase III <sup>1</sup> ). No pinyon present.
PINYON	Pinyon	Major component of the site (Phase III <sup>1</sup> ). No juniper present.
PJ	Pinyon-Juniper	Major components of the site (Phase III <sup>1</sup> ). Pinyon and Juniper present.
POTR	Quaking Aspen	POTR provides the dominant overstory (typically >5% cover).
POTR-CE	Quaking Aspen-Conifer Encroached	Mixture of QUGA and Conifers (conifers typically provide >5% cover).
PIPO	Ponderosa Pine	PIPO provides the dominant overstory (typically >5% cover).
PSMEM	Douglas Fir	Major component of the site (typically >5% cover).
ABCO	White Fir	Major component of the site (typically >5% cover).
PIFL	Limber Pine	Major component of the site (typically >5% cover).
PICO	Lodgepole Pine	Major component of the site (typically >5% cover).
PILO	Bristlecone Pine	Major component of the site (typically >5% cover).
PIEN	Engelmann Spruce	Major component of the site (typically >5% cover).
ABLA	Subalpine Fir	Major component of the site (typically >5% cover).
SUBALP	Subalpine Forest	Mixture of PIEN and ABLA provide the dominant vegetation cover
MIX CON	Mixed Conifer Forest	Mixture of conifer tree species provide the dominant vegetation cover
AG-PAST	Agricultural-Pasture	Active or abandoned agricultural pasture
AG-CL	Agricultural-Cropland	Active or abandoned agricultural cropland
*Vegetation types can be co-dominant on the study site and when more than one vegetation community types are co-dominant and are major components of the site a (/) is used to separate vegetation community types.		
<sup>1</sup> Phase of woodland succession
